AWAROOM

The hotel booking management system is designed to make life easier for hotel owners and their staff. When a user (hotel owner) registers for the first time on the system, they receive a hotel code and a username through their registered email. This unique combination of the hotel code and username allows users to log in anytime they want to access the system. Once registered on the system, they become admins, giving them full control over their hotel's operations. To ensure security, a one-time password (OTP) is sent to their registered email every time they log in.

Once logged in, hotel owners can manage their staff. They can add new staff members and even handle their pay through the system. This streamlines the process and keeps everything organized.

Similarly, when staff members are added on the system, they also receive their own usernames and hotel codes. However, to log in, they would need to be provided with the owner's password. This allows the owner to maintain control over access and keep tabs on who is using the system.

Additionally, the system offers financial management features. Hotel owners can use it to keep track of the money coming in and going out, effectively managing their finances and revenue. It's an essential tool for maintaining financial transparency and ensuring the smooth operation of the hotel. Once the admin logs in, they can configure various aspects of the hotel, including hotel setup which includes hotel information, amenities, revenue sources, user roles, departments, and expenditure heads. This ensures that the system is customized to meet the specific needs of the hotel.

The user account feature allows the admin (hotel owner) to add staff members and their relevant information, such as their roles, departments, and even their salary details, including bonuses. It helps in managing the staff effectively.

The revenue item setup is where the admin can add different items that generate income for the hotel, such as meals in the restaurant. This includes details like the meal, its cost, portion sizes, and more. It helps in keeping track of the hotel's revenue sources.

The hotel room setup allows the admin to add room categories, along with pictures and information about each room, including the cost and check-out time. It helps in managing room bookings efficiently.

The hall setup feature enables the admin to add information about the halls available in the hotel, including their cost. This is useful for managing events and gatherings in the hotel.

The corporate account setup is specifically designed for business accounts. It allows companies or firms to have their staff members' bills charged to their account, rather than paying directly. It simplifies the payment process for credit customers.

The customer setup feature allows the admin to add customers to the system. When a customer wants to book a room, their phone number is entered into the system. If the customer's information is already in the system, it can be fetched automatically. If not, the admin can add the customer's details to the system.

Lastly, the hotel expenditure setup which includes the revenue and finances helps in managing the hotel's expenses, ensuring transparency in financial management.

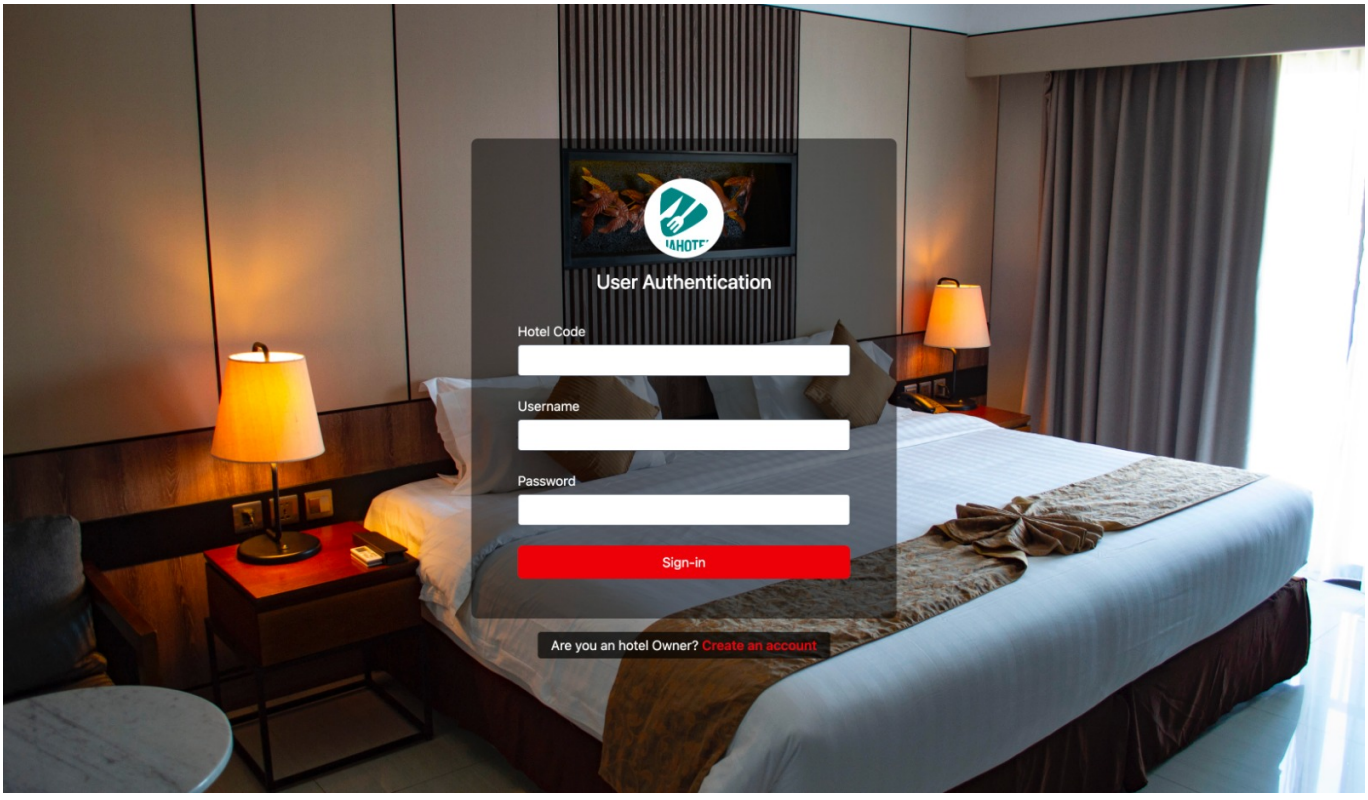

The system also provides a comprehensive overview of the hotel's room status. Hotel owners can easily see which rooms are available for booking, which ones are occupied, and even which ones are under repair or need cleaning. This allows for efficient management and ensures a smooth experience for guests.

In addition to managing the rooms, the hotel management system also provides information on the availability of halls in the hotel. This allows hotel owners and staff members to easily check if the halls are available for events or gatherings.

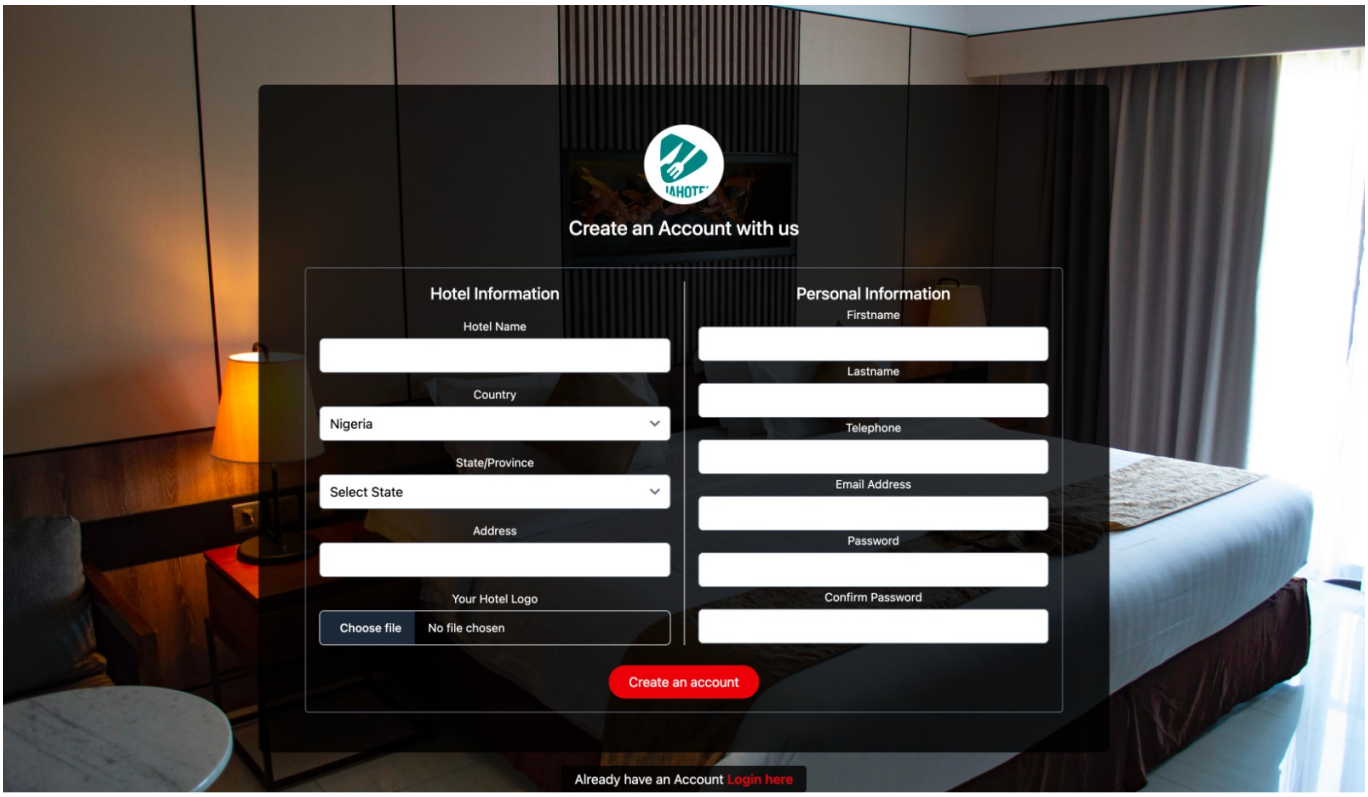

Furthermore, the system simplifies the overall management of the hotel for both the owner and the staff. Once the owner adds staff members through the system, they can log in using their own credentials. This ensures that each staff member has their own access and can perform their assigned tasks efficiently.

The hotel owner is the main admin in this system he can perform various tasks and use the different features the system offers, but in order to have access to all these the hotel owner must first register on the system. To get started you first need to create an account an the website at https://roomstatus.com/login. To do so you will click on the login button where you can login to an existing account or create your own account if you do not have one.

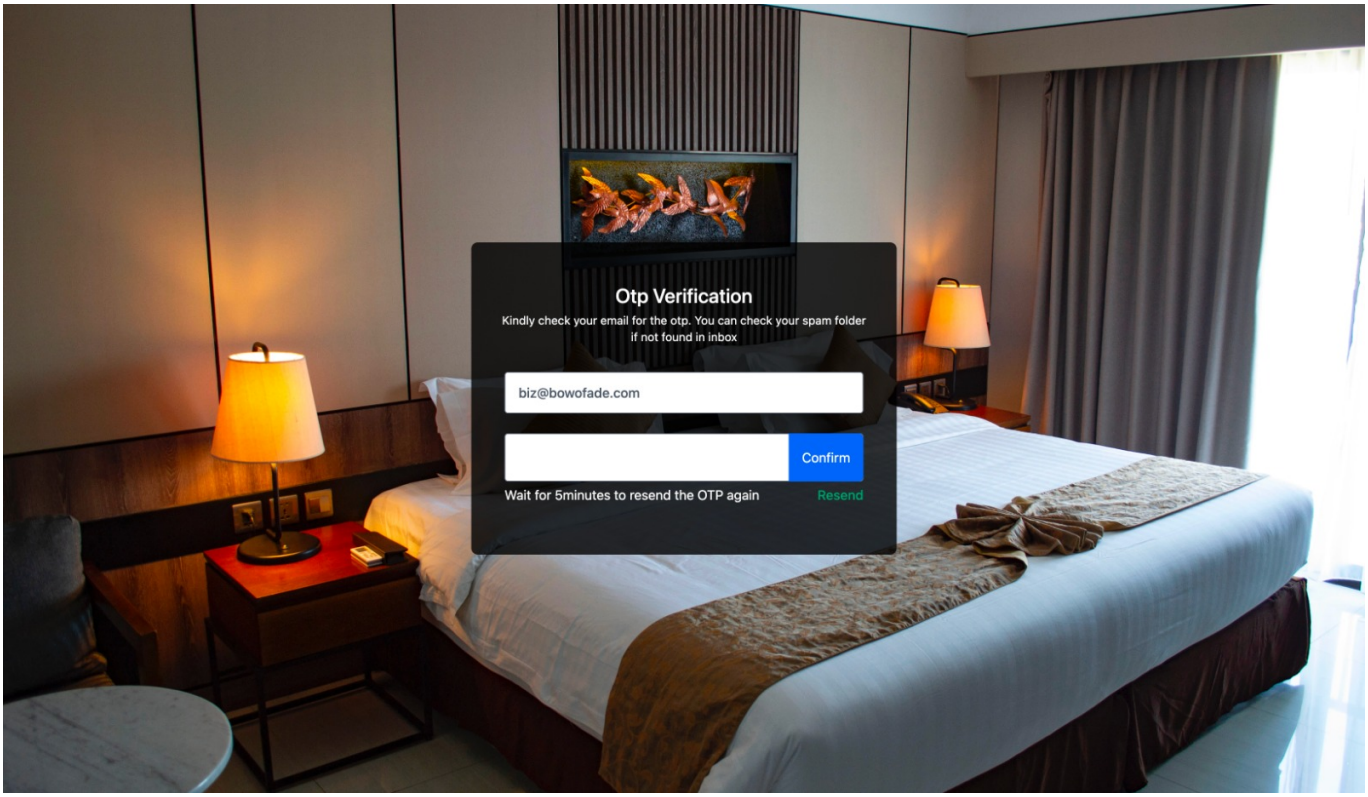

Click on the create account account link if you do not have an account. If you have created an account login with your hotel code, username and password.

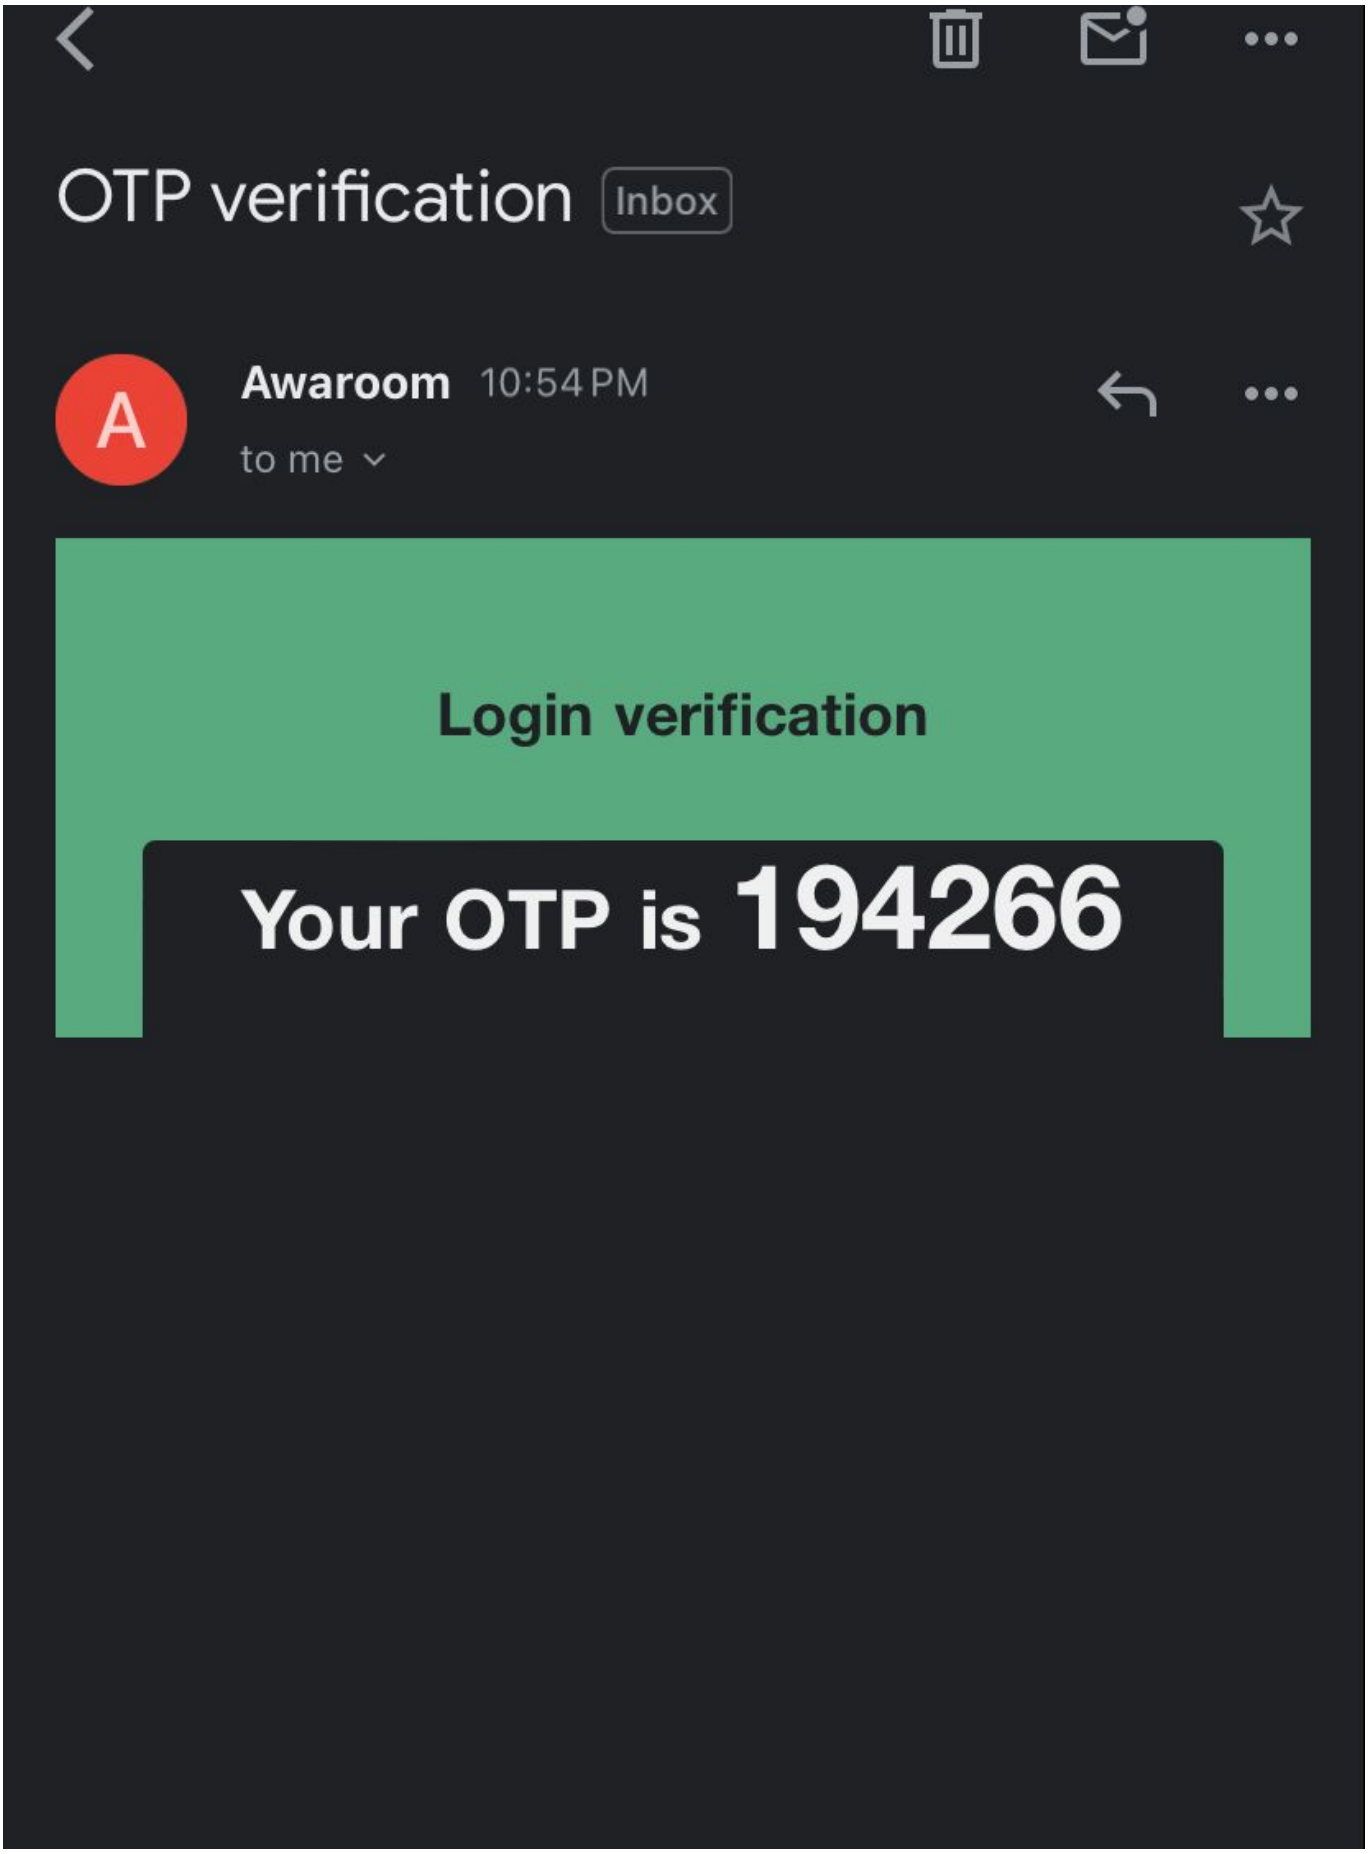

You will be directed to this page where you will go ahead to fill in the correct details of your hotel and your personal information.After you fill in the details clik on the CREATE AN ACCOUNT button.

After creating an account you will be directed to this page where you can enter the OTP verification code you received in your registered mail. An OTP will be sent to your mail anytime you want to login.

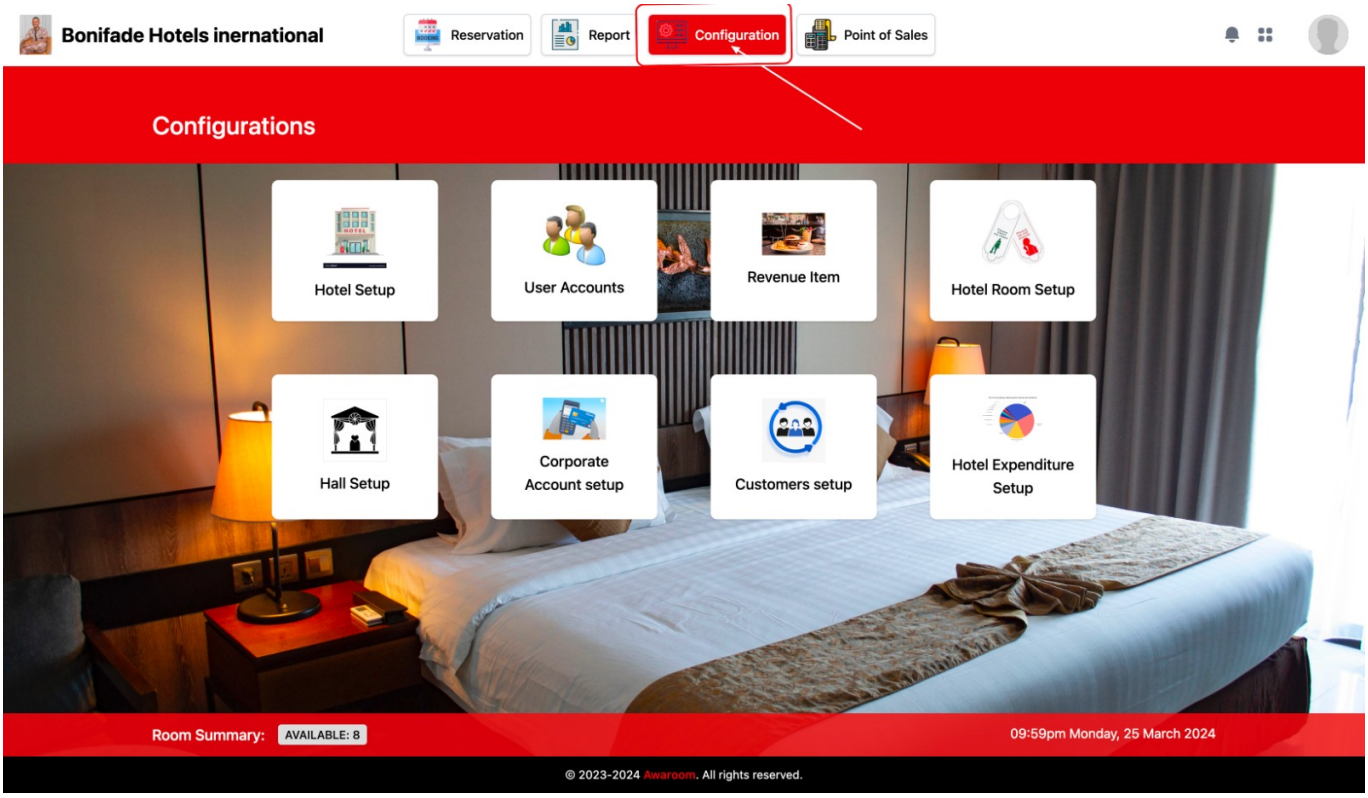

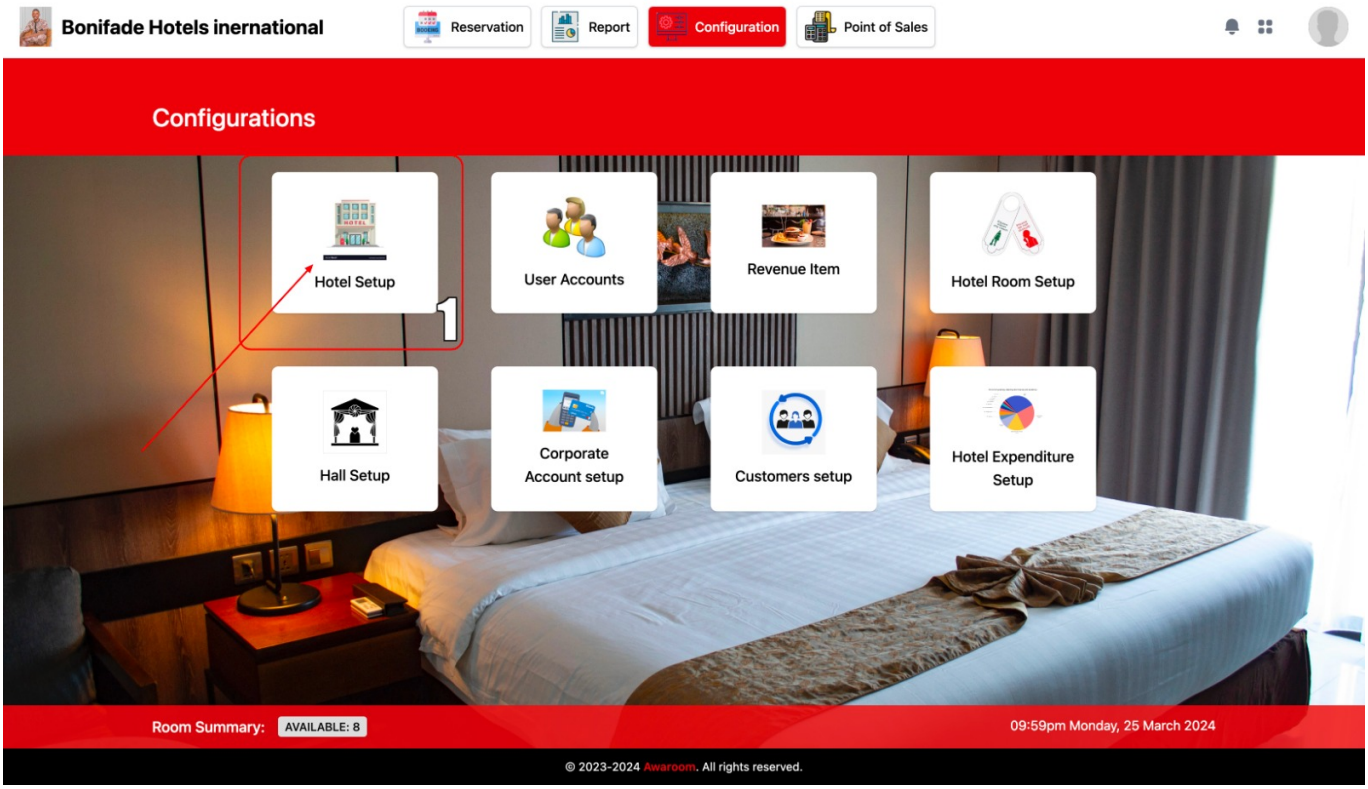

After entering the OTP you will click on the confirm button.

After creating an account and confirming your OTP, you will have successfully logged into your account. But first there some configuration that should be set to fully utilize the system. Here are steps to follow to

configure your system. Click on the configuration button at the top of your screen to get started.

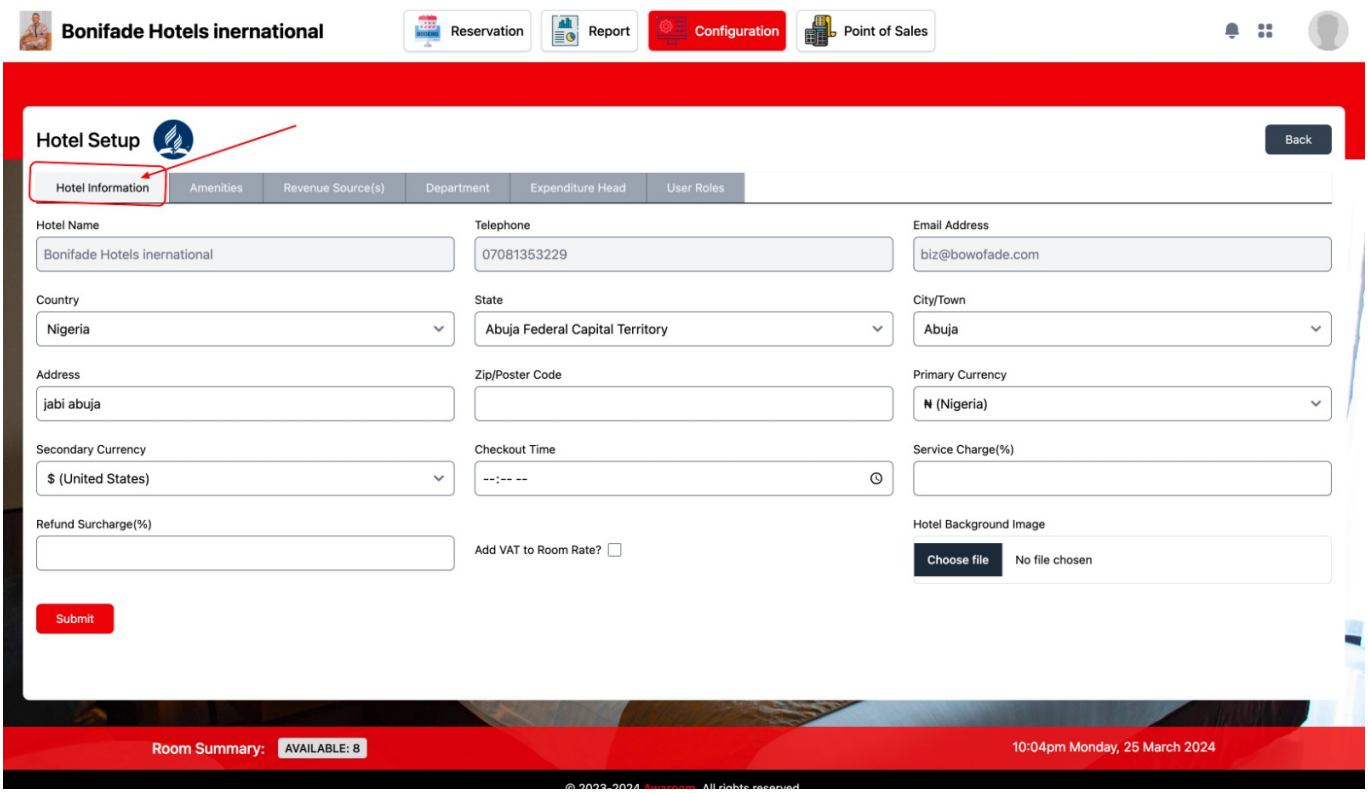

The first thing to do is the Hotel Setup.

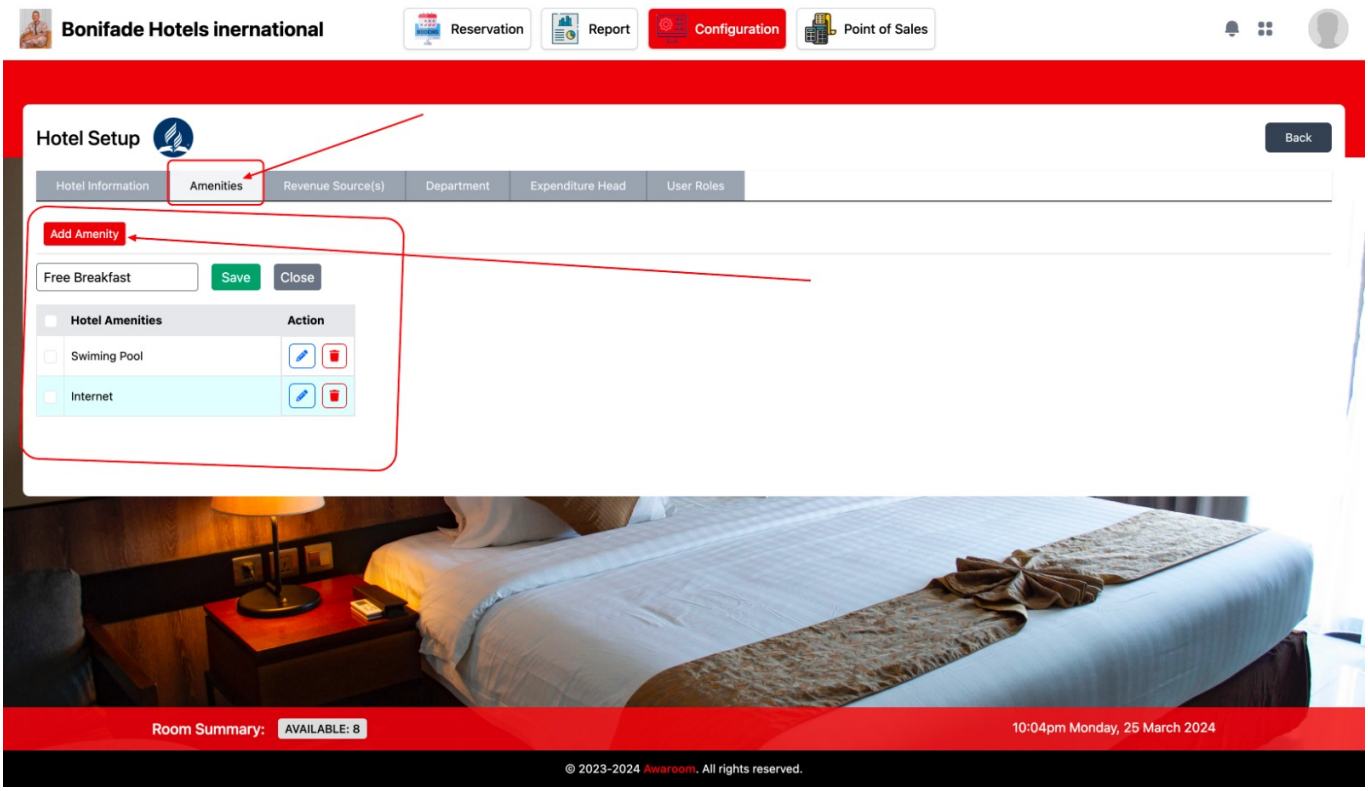

The **Hotel Setup** includes hotel information, amenities, revenue sources, user roles, departments, and expenditure heads.

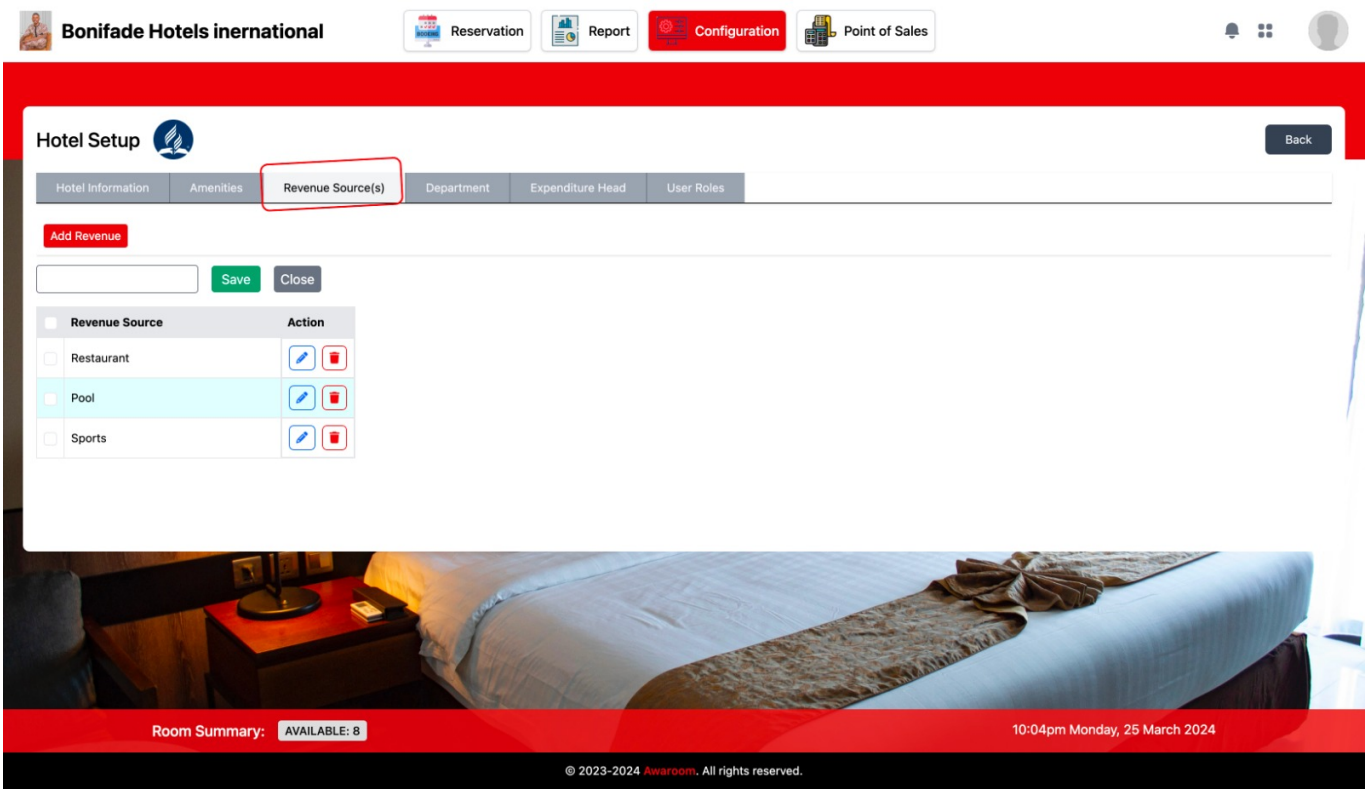

Hotel Information This allows the admin to add additional information to the hotel information provided when registering. Like the Zip/Poster code, Primary currency, Secondary currency, Checkout time etc.

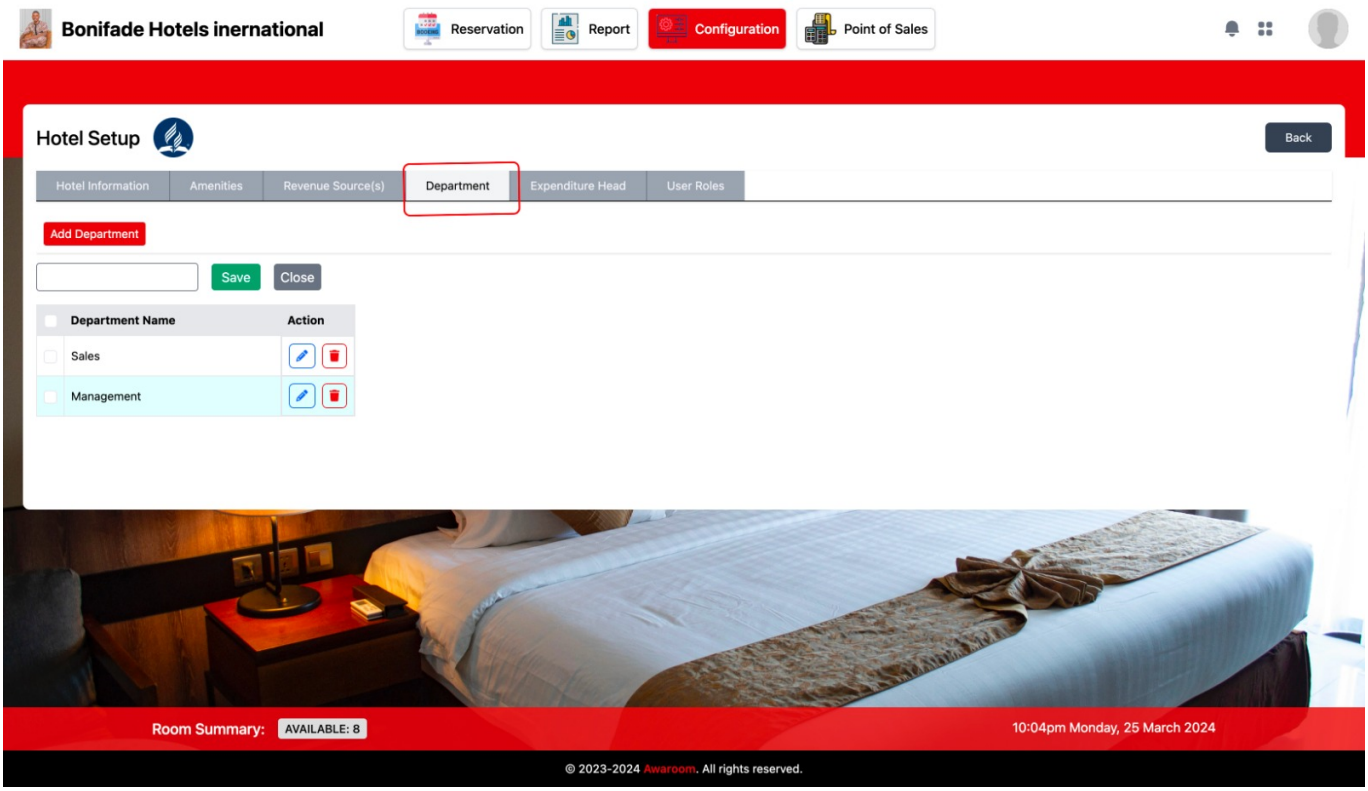

Amenities This is where the various amenities offered by the hotel to their guests can be added. Amenities like wifi/internet, breakfast etc. To add amenities simply click on the Add Amenity button.

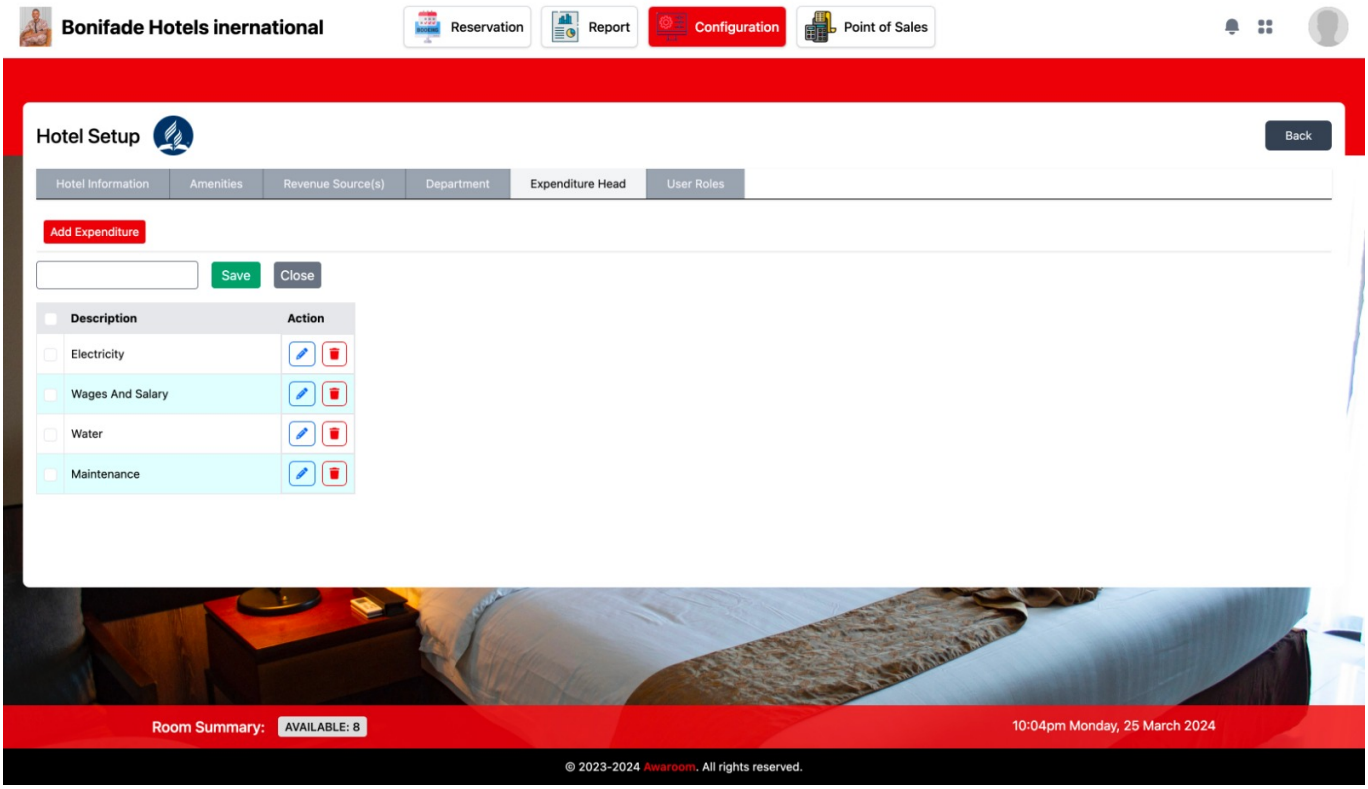

Revenue Source This is where the sources of revenue can be added . The sources of revenue are the sources through which the hotel generates profit. Examples are the Kitchen which is also the resturant, the pool etc. To add Revenue Source simply click on the Add Revenue button.

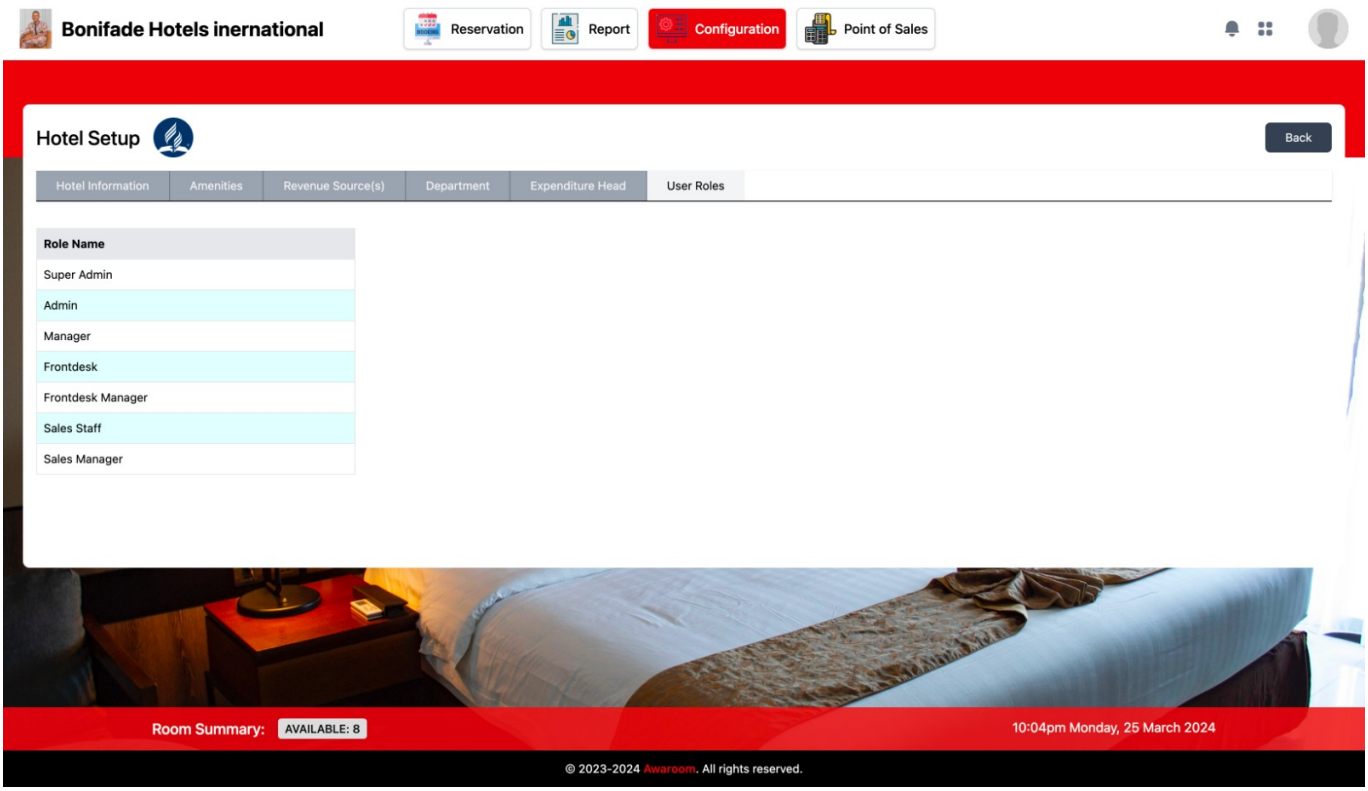

Department This is where the various departments in the hotel are added. To add department click on the Add Department button.

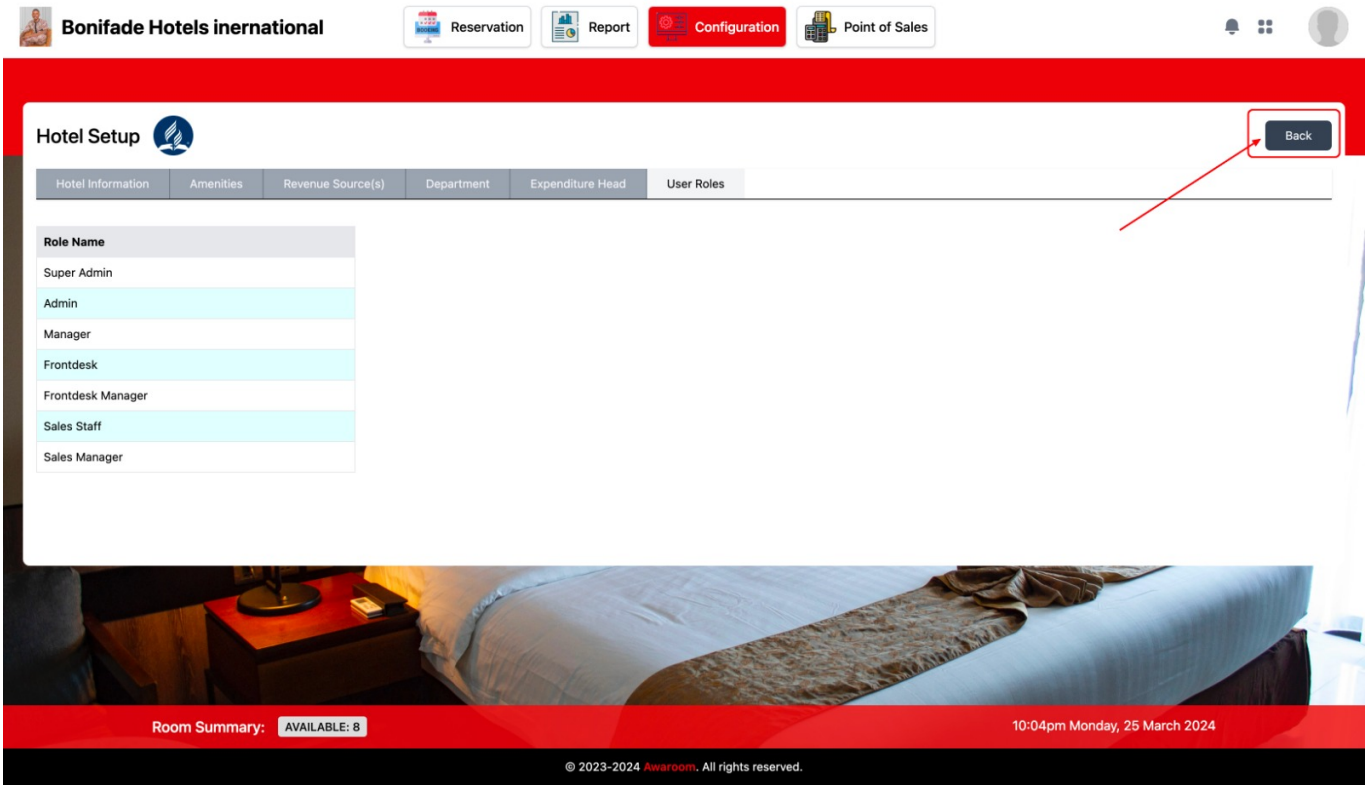

Expenditure Head This is where the expenditure heads of the hotel can be added. Expenditure Head are the things the hotel pays for in order to operate smoothly.Expenditure head must be setup in the hotel setup before expenditure can be added. To Add Expenditure click in the add Expenditure button.

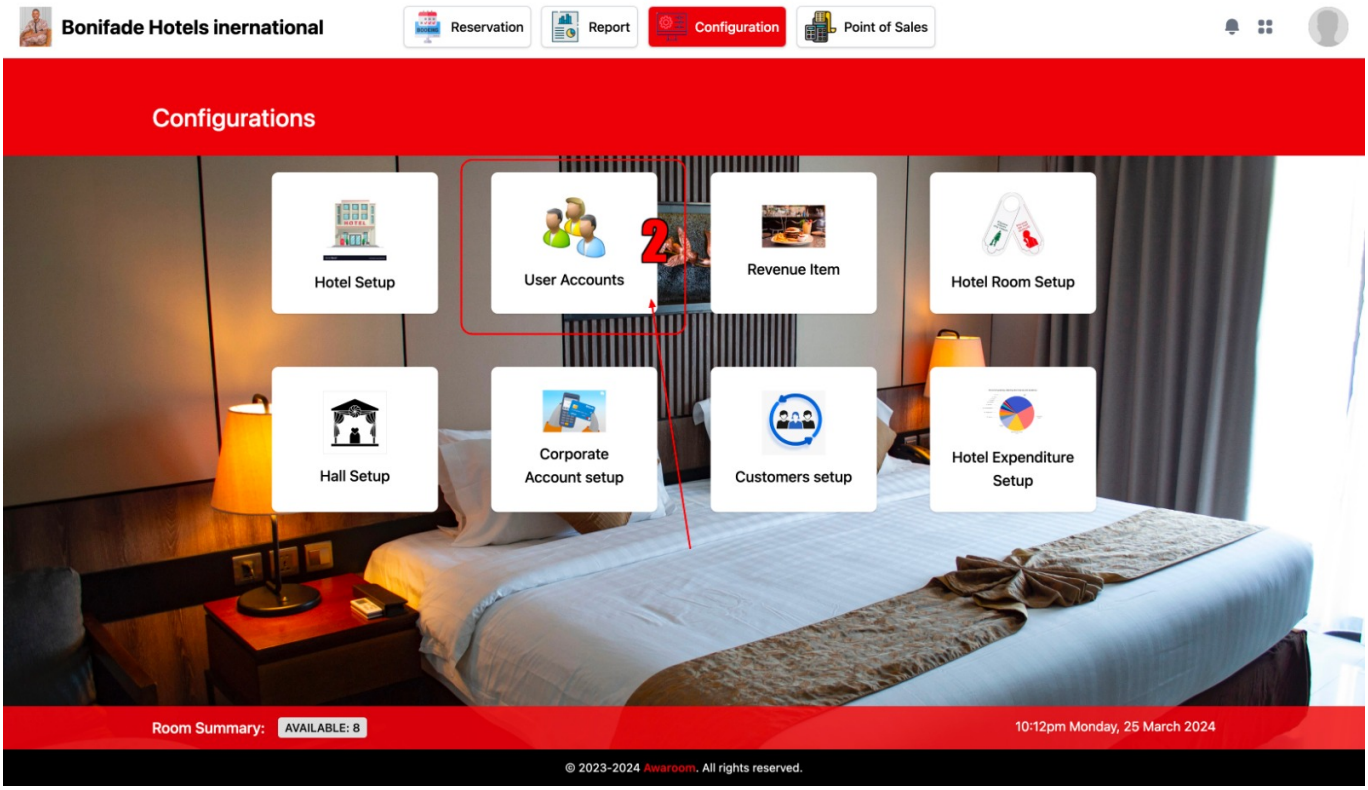

User Roles This feature cannot ne edited, these are the roles of the different users on the system. They are the hotel staff that are added by the admin who have access to the system.

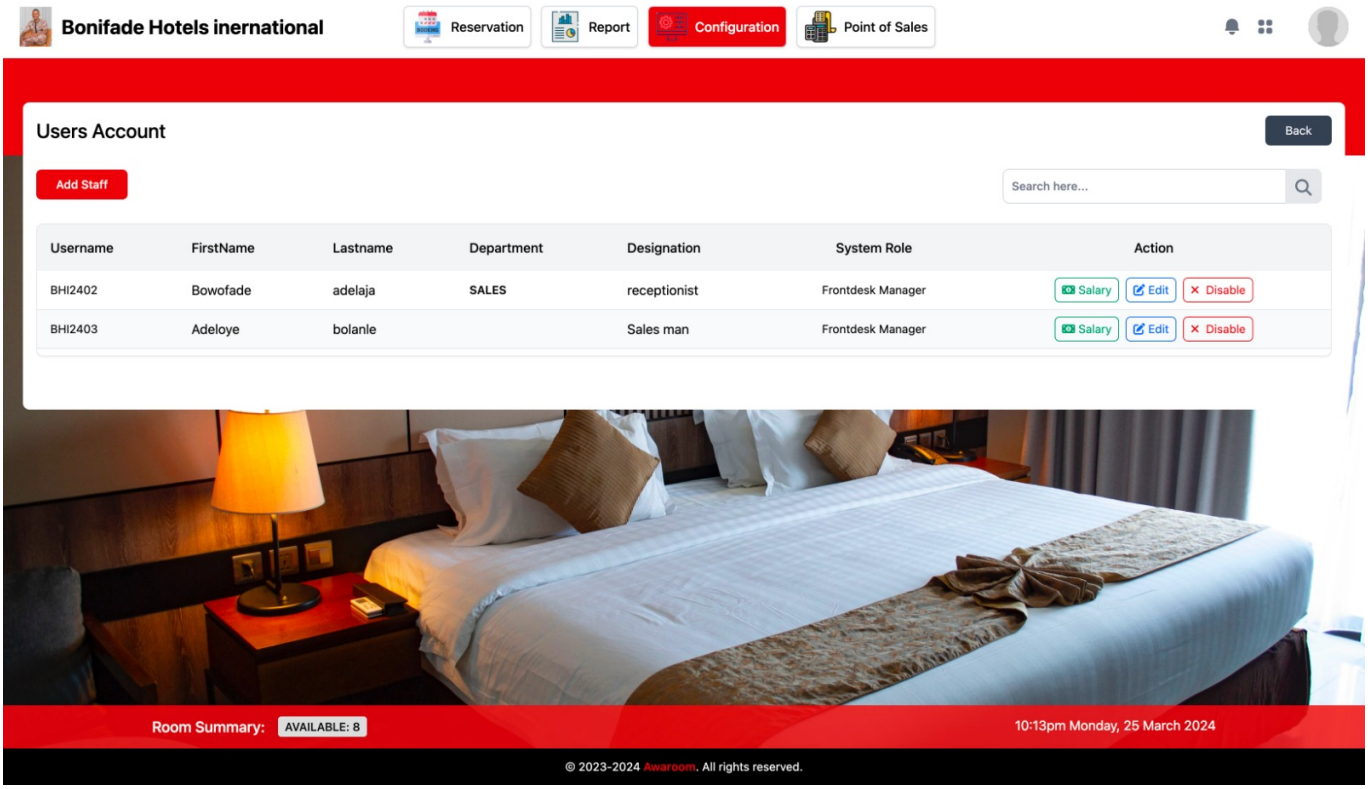

After completing the Hotel Setup, click in the back button at the top right corner to continue.

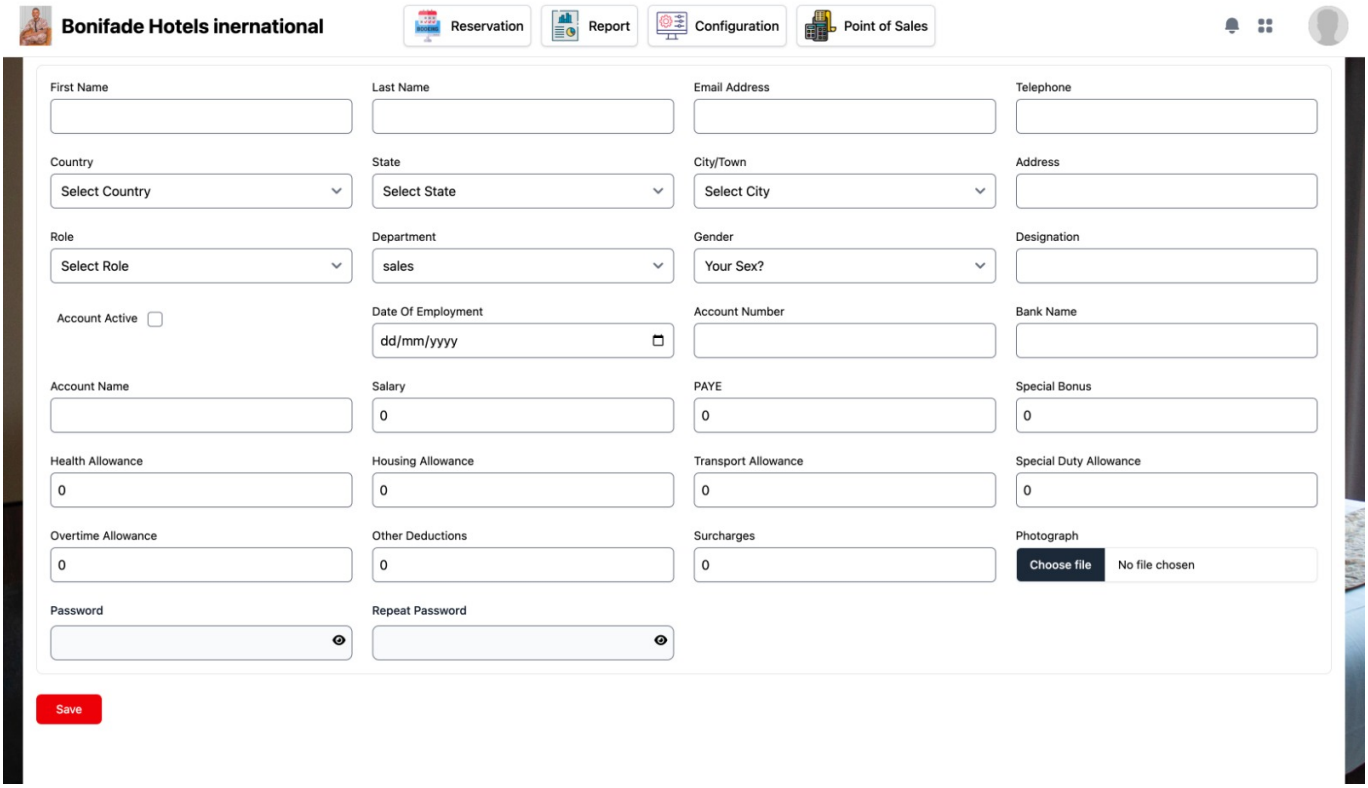

The User Accounts.

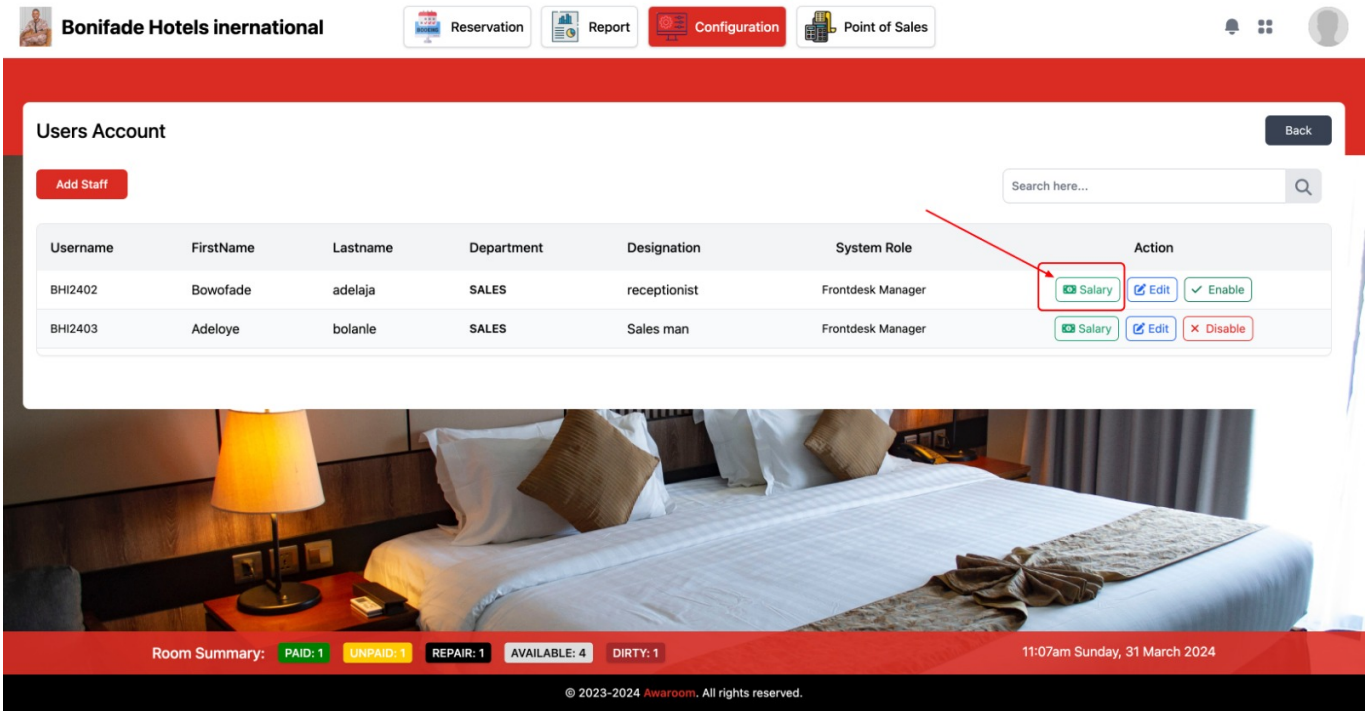

This is where staff members can be added into the system with their department and designation, the user full information including their salaries will also be added . The admin can disable a user/staff on the system this prevents them from logging into the system and the admin can enable such staff/user on the system. The user/staff information can also be edited on the system.

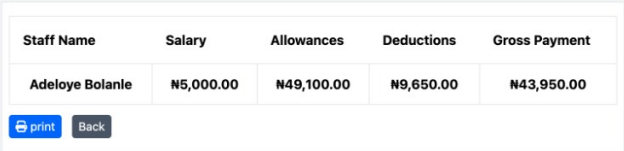

To Add Staff click in the add staff button.The staff details will be entered and then saved by clicking on the save button.

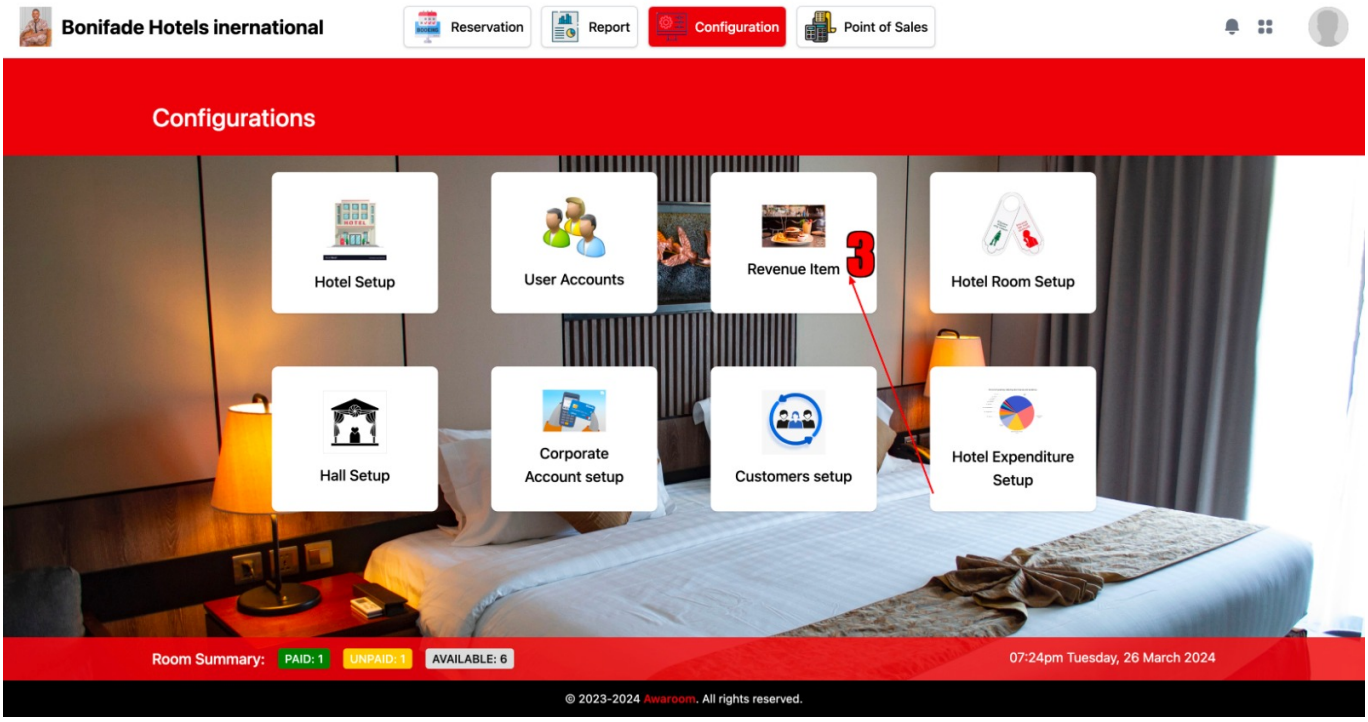

To check the staff paycheck go to the user account page and click on the salary button on the any of the staff.

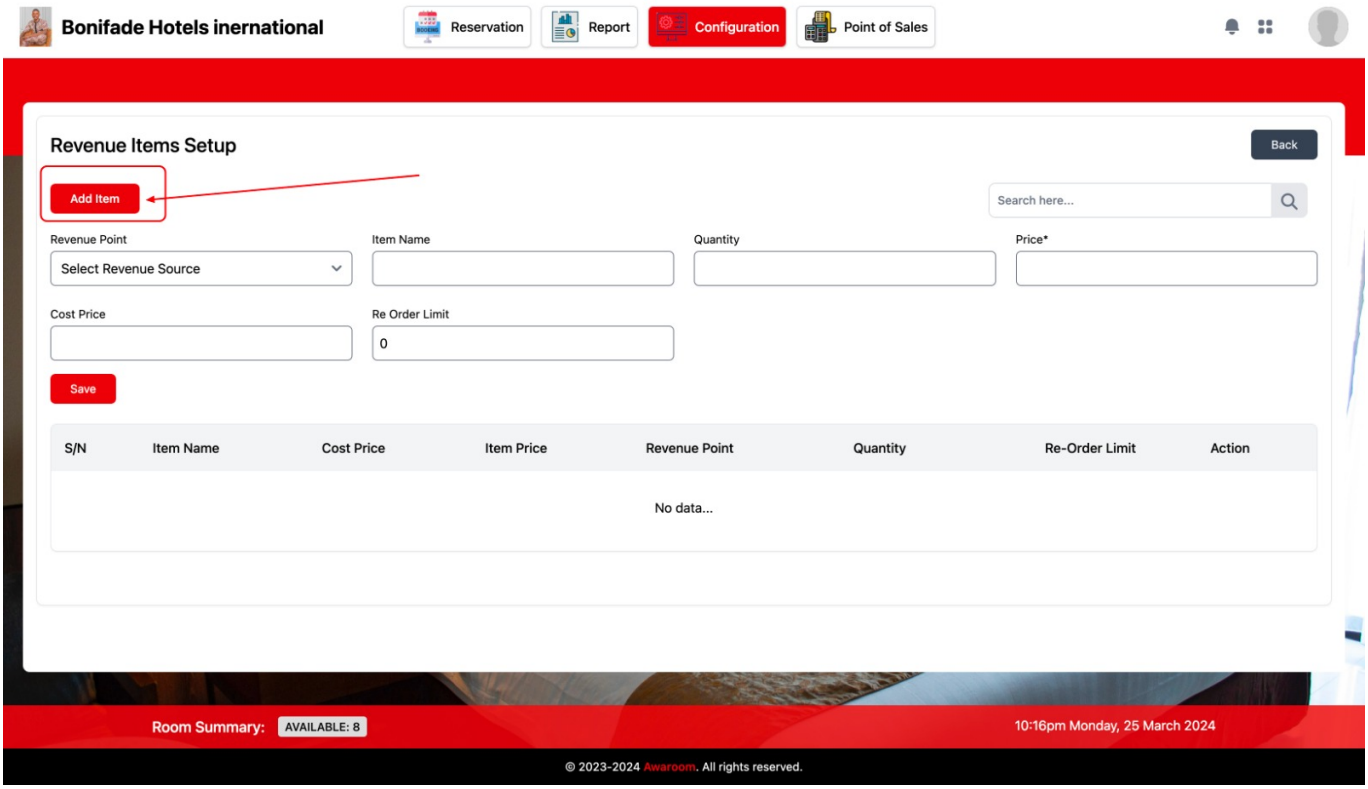

The paycheck can also be printed.

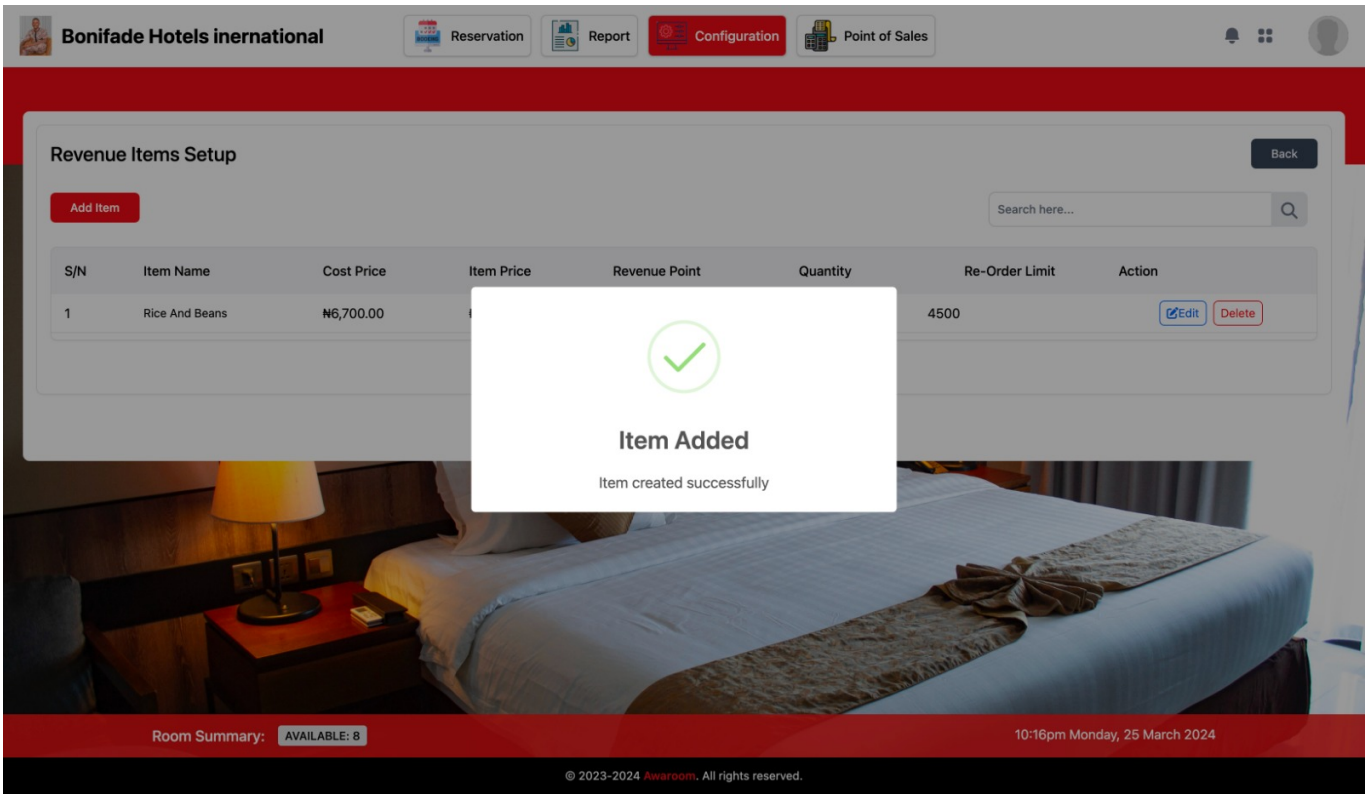

Revenue Item

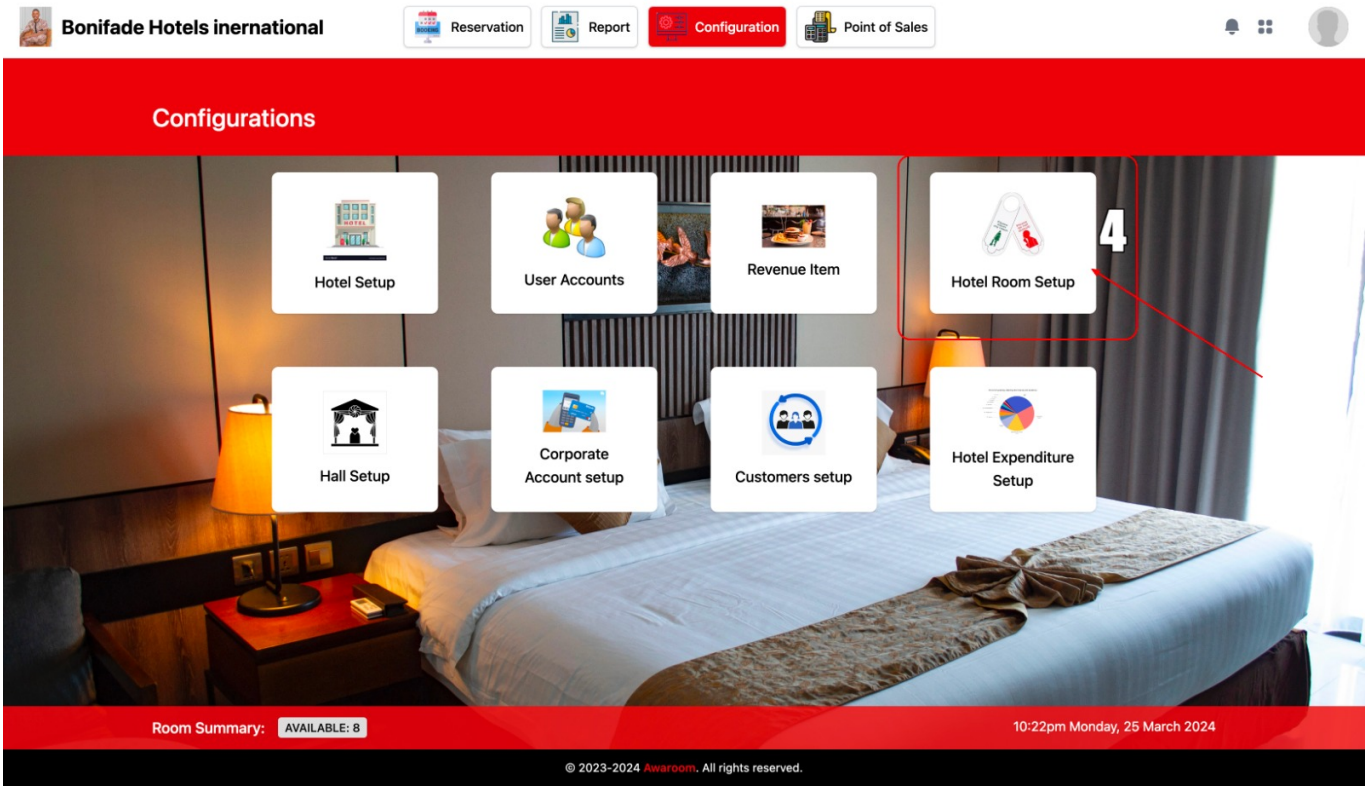

The revenue item setup is where the admin can add different items that generate income for the hotel, such as meals in the restaurant. This includes details like the meal, its cost, portion sizes, and more. To add items click in the add item button.

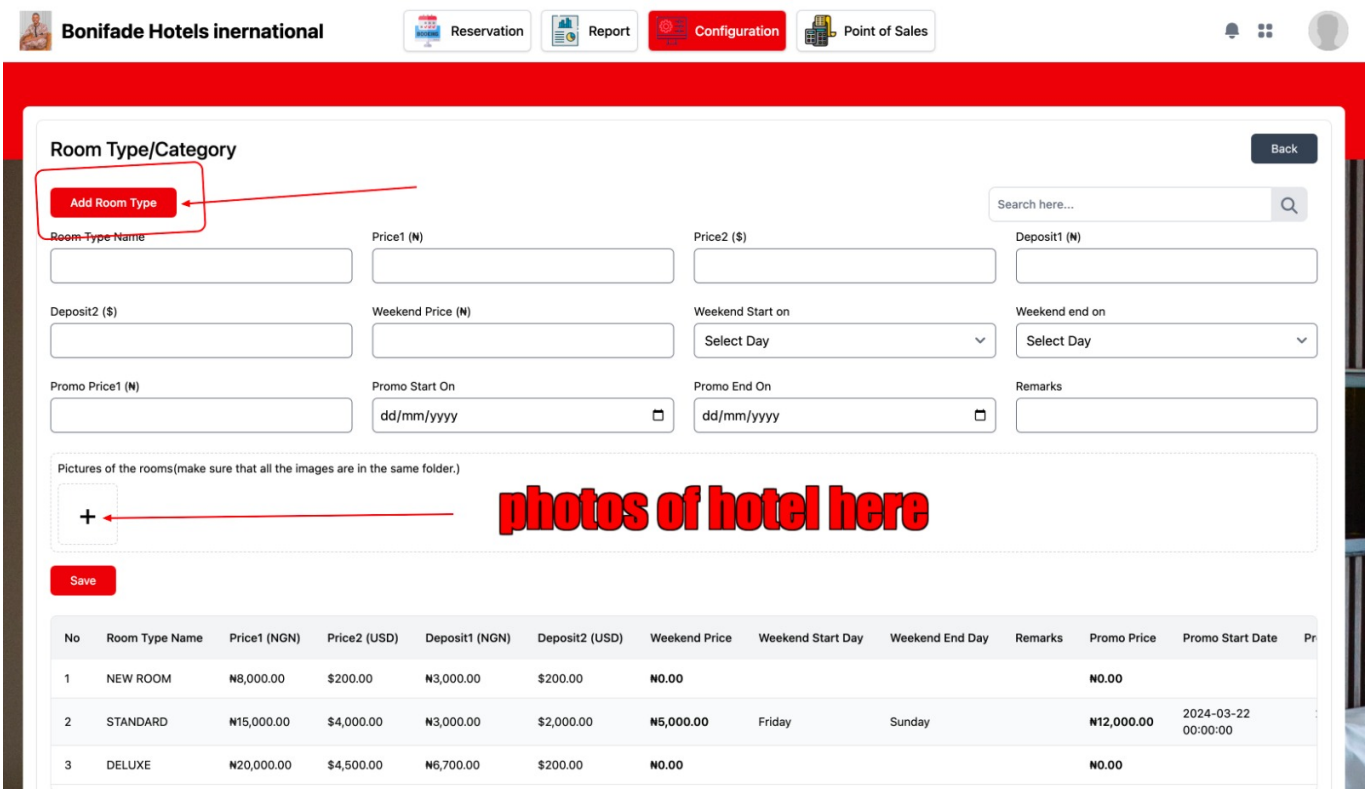

When item is successfully added into the system you get a success alert.

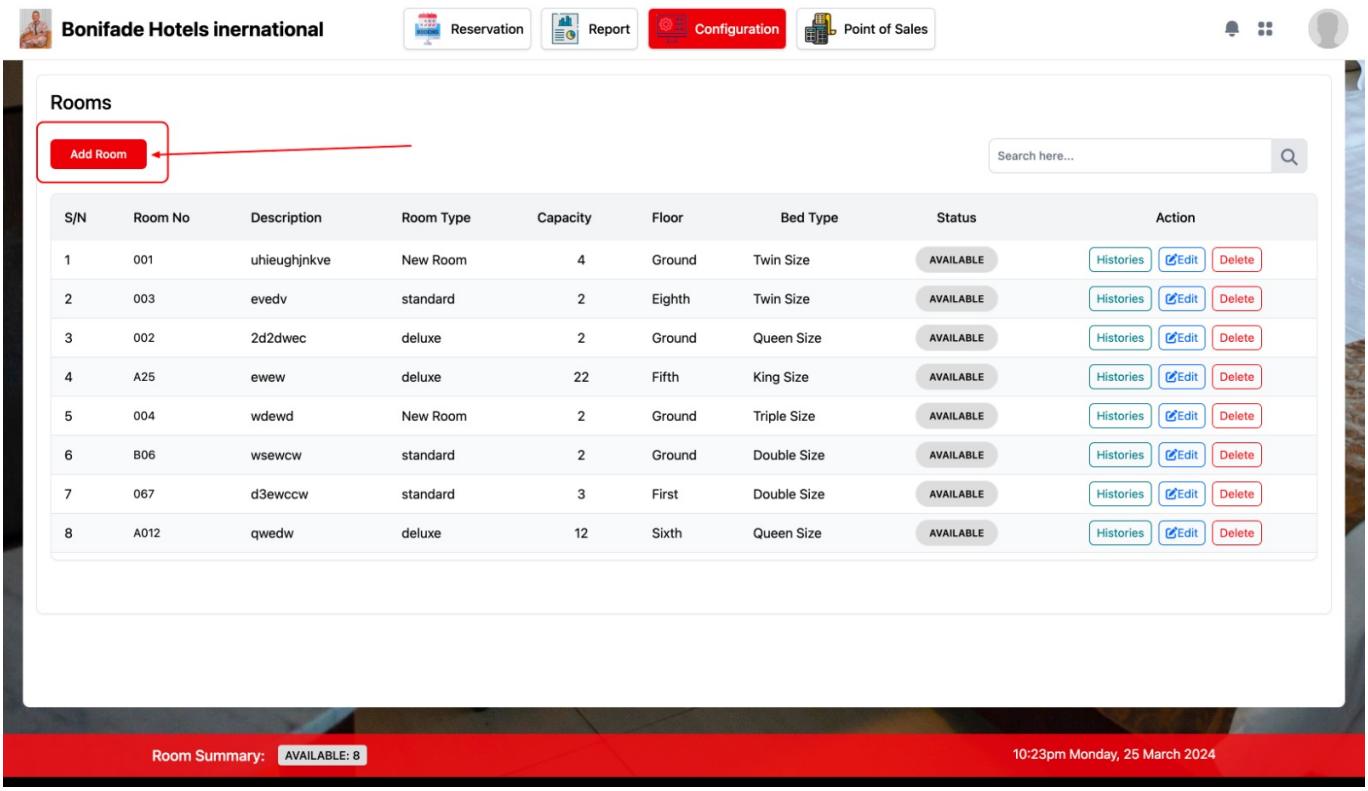

Hotel Room Setup

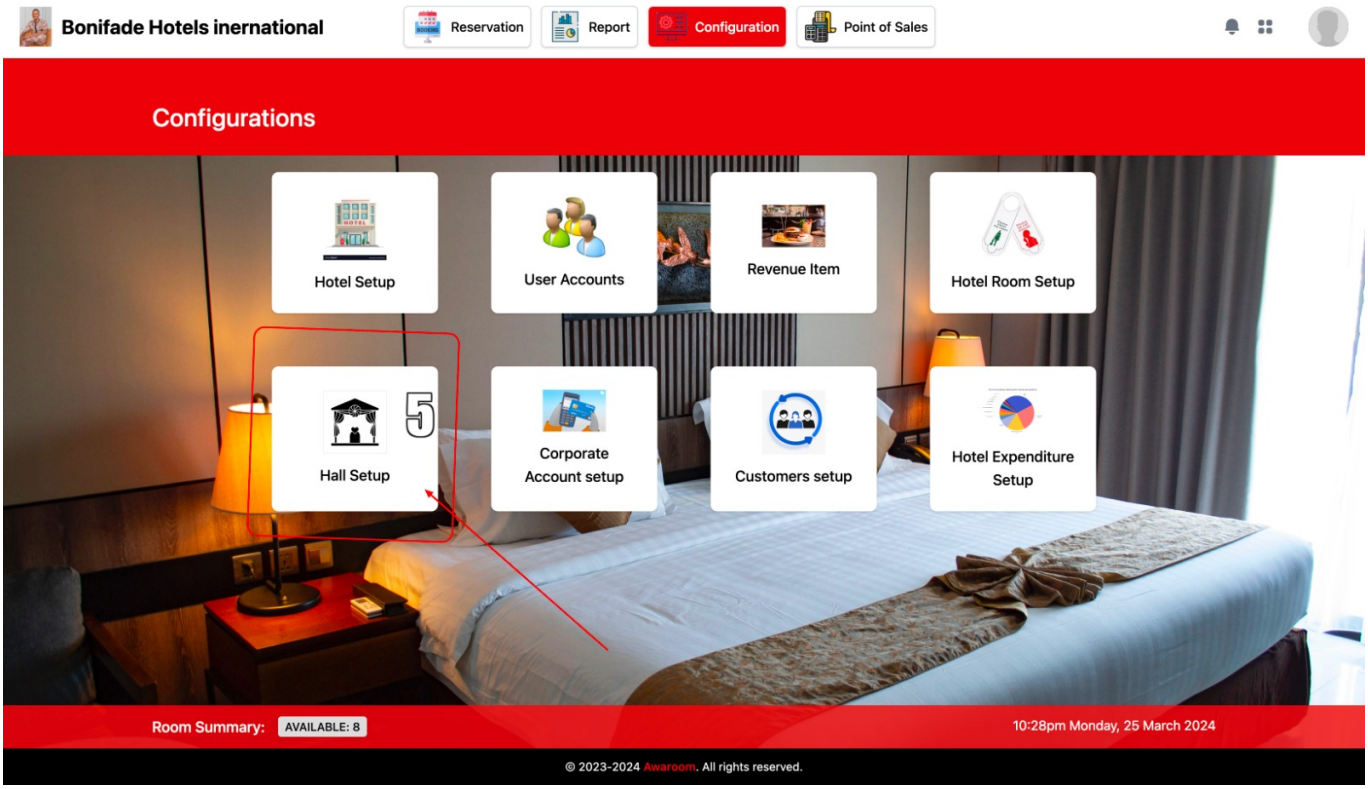

The hotel room setup allows the admin to add room categories/types, along with pictures and information about each room, including the cost and more. It helps in managing room bookings efficiently. To add room type click on the add room category button, after all details has been filled click in the save button to save.

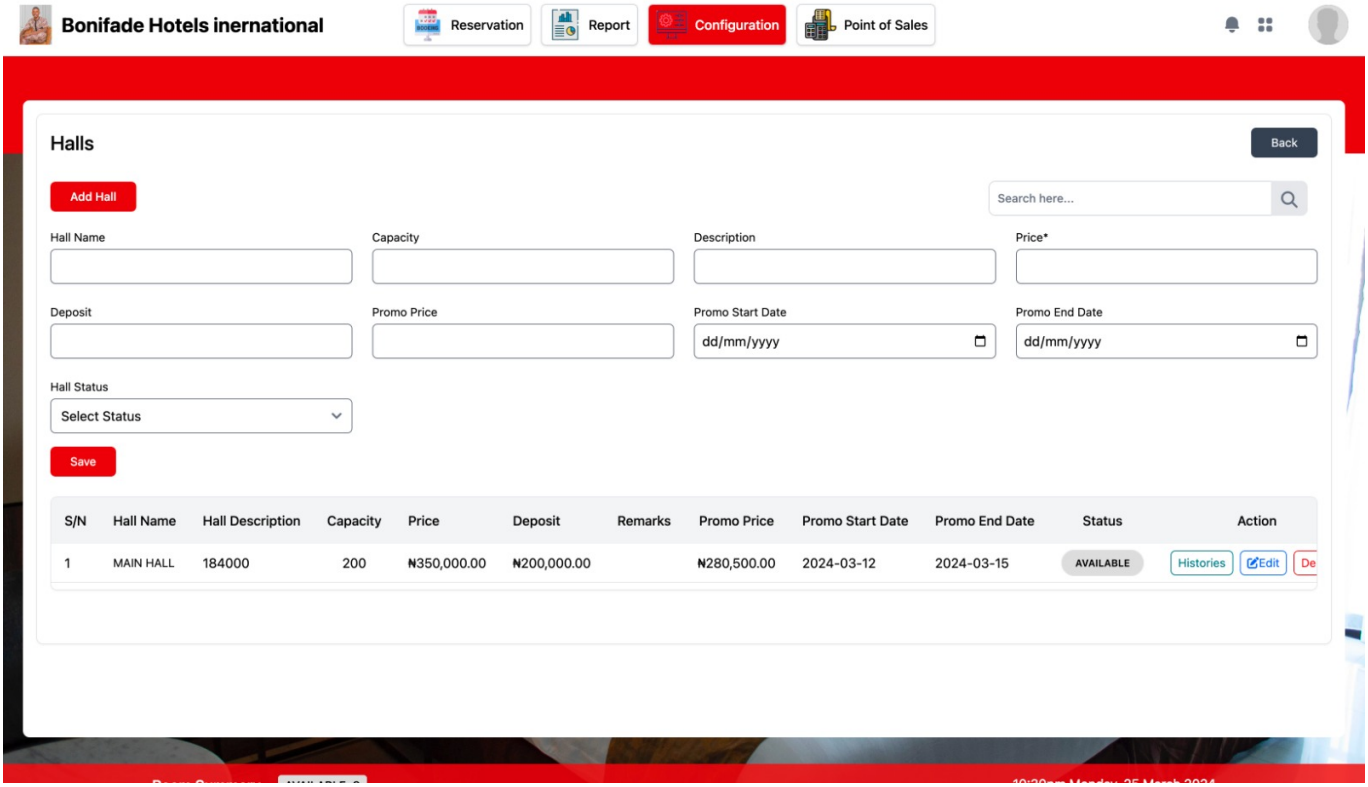

After adding room categories/type you can now procede to add rooms. To add room click on the add room button and click in save after filling the details.

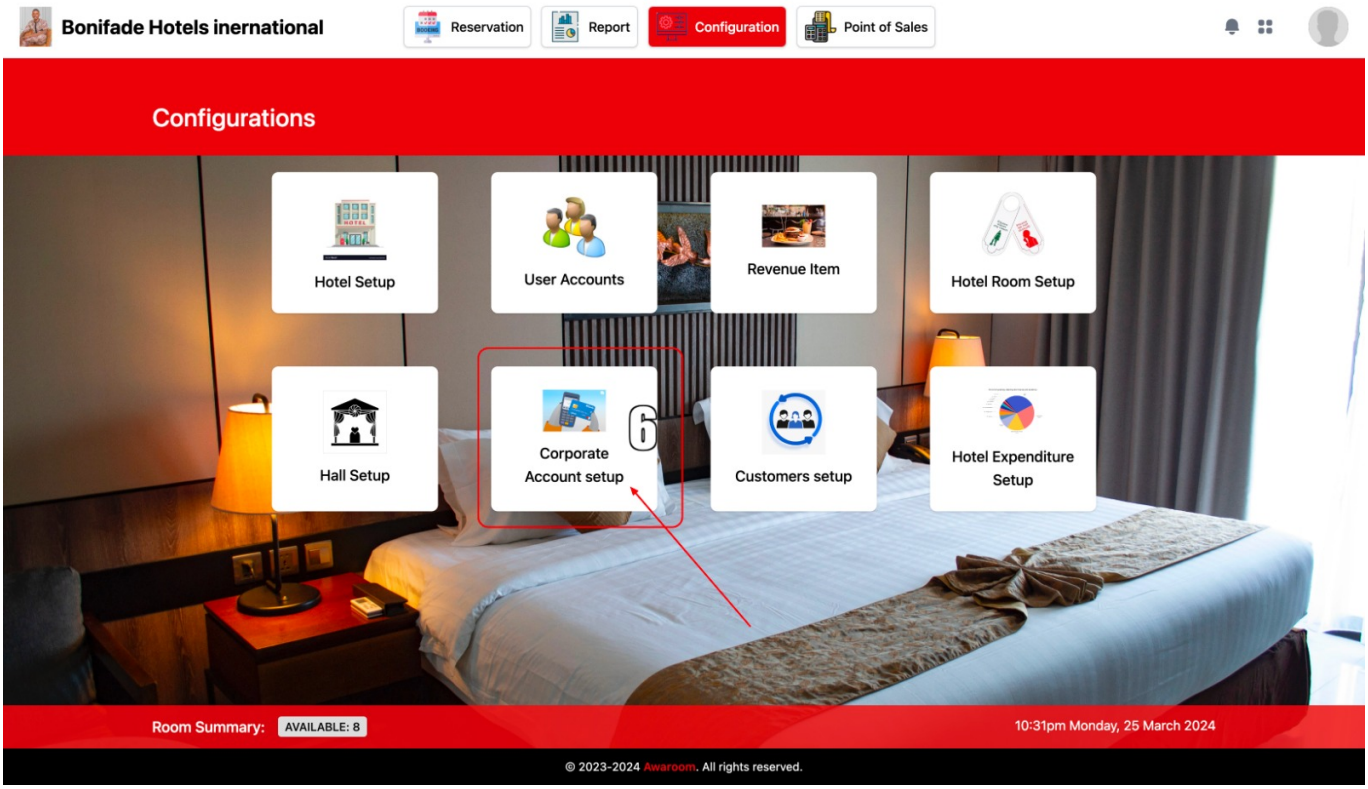

Hall Setup

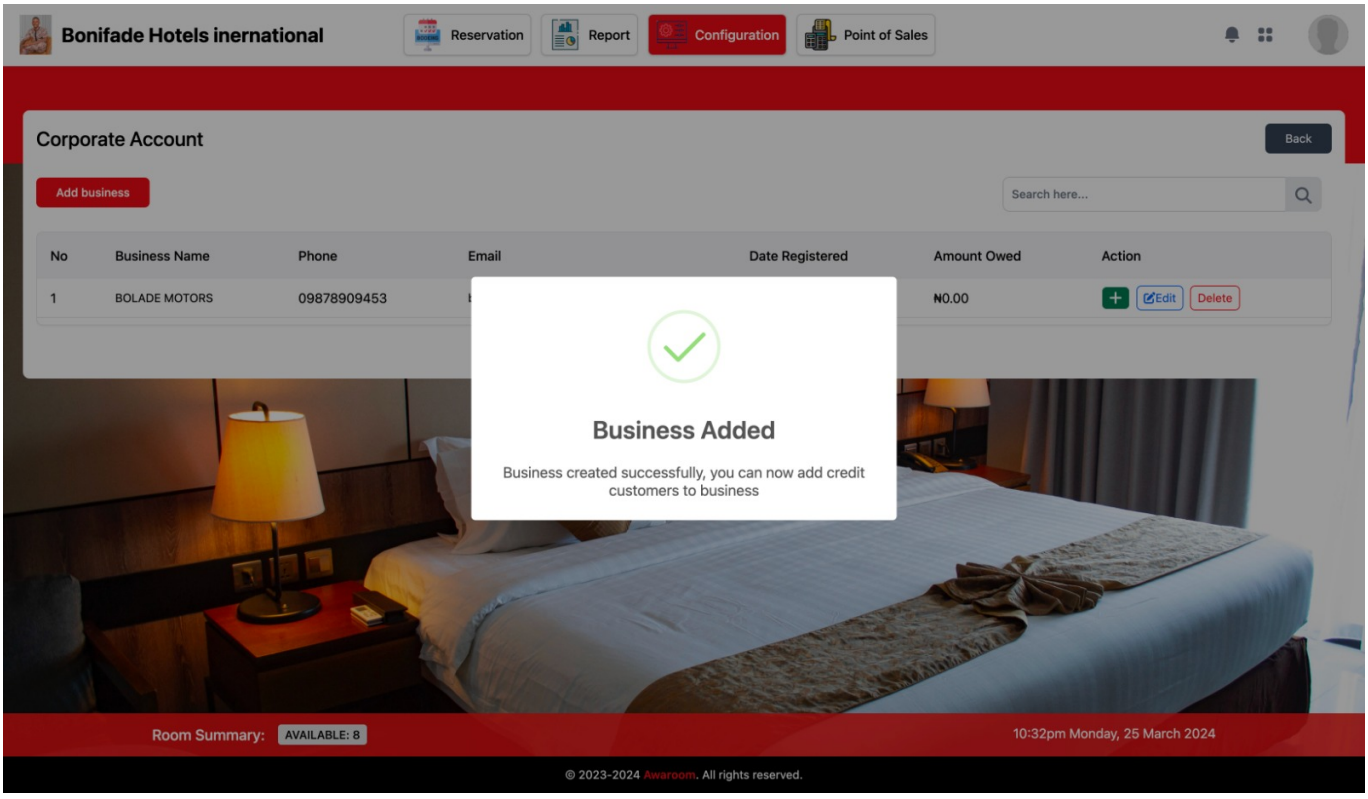

This allows the admin to add information about the halls available in the hotel, including their cost and the photos of the halls. To add halls click on the add hall button and after filling the details click on the save button to save.

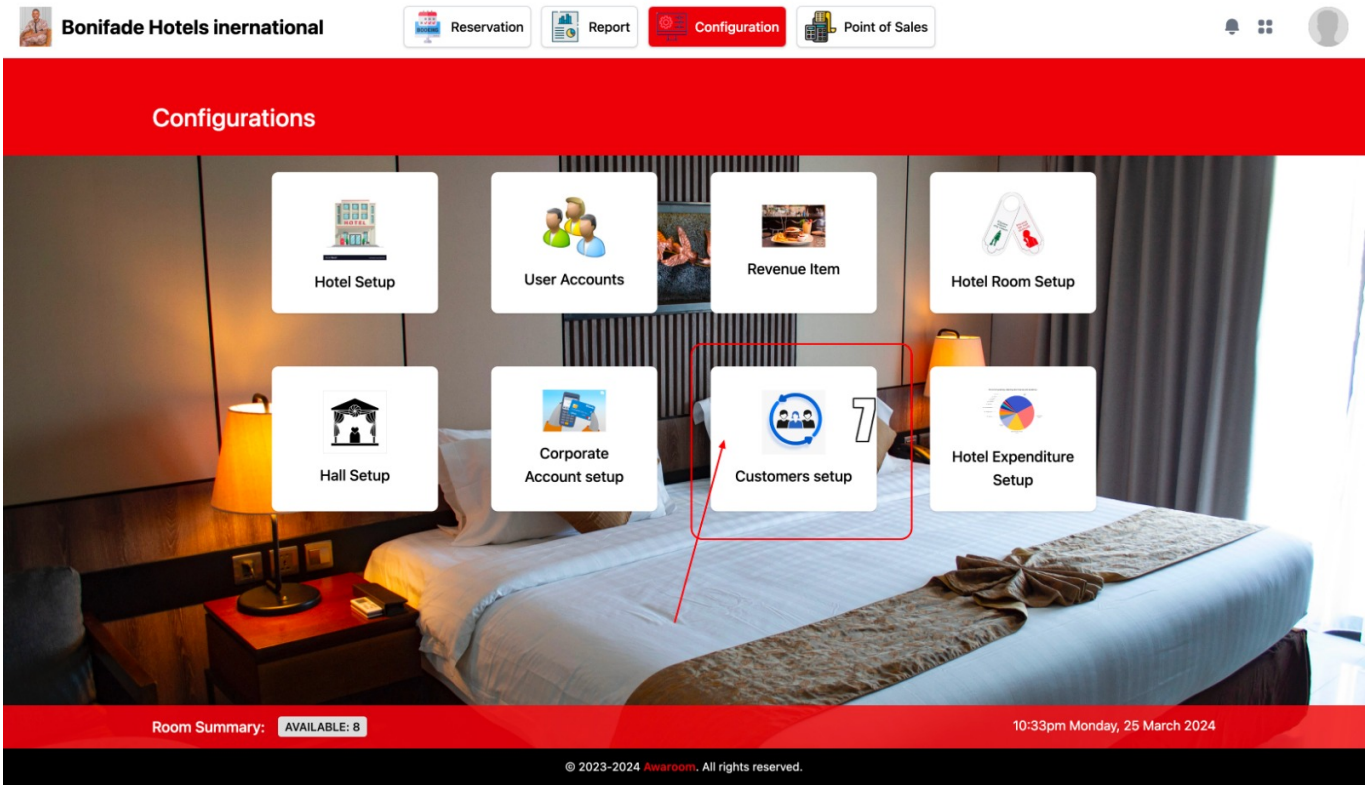

Corporate Account Setup

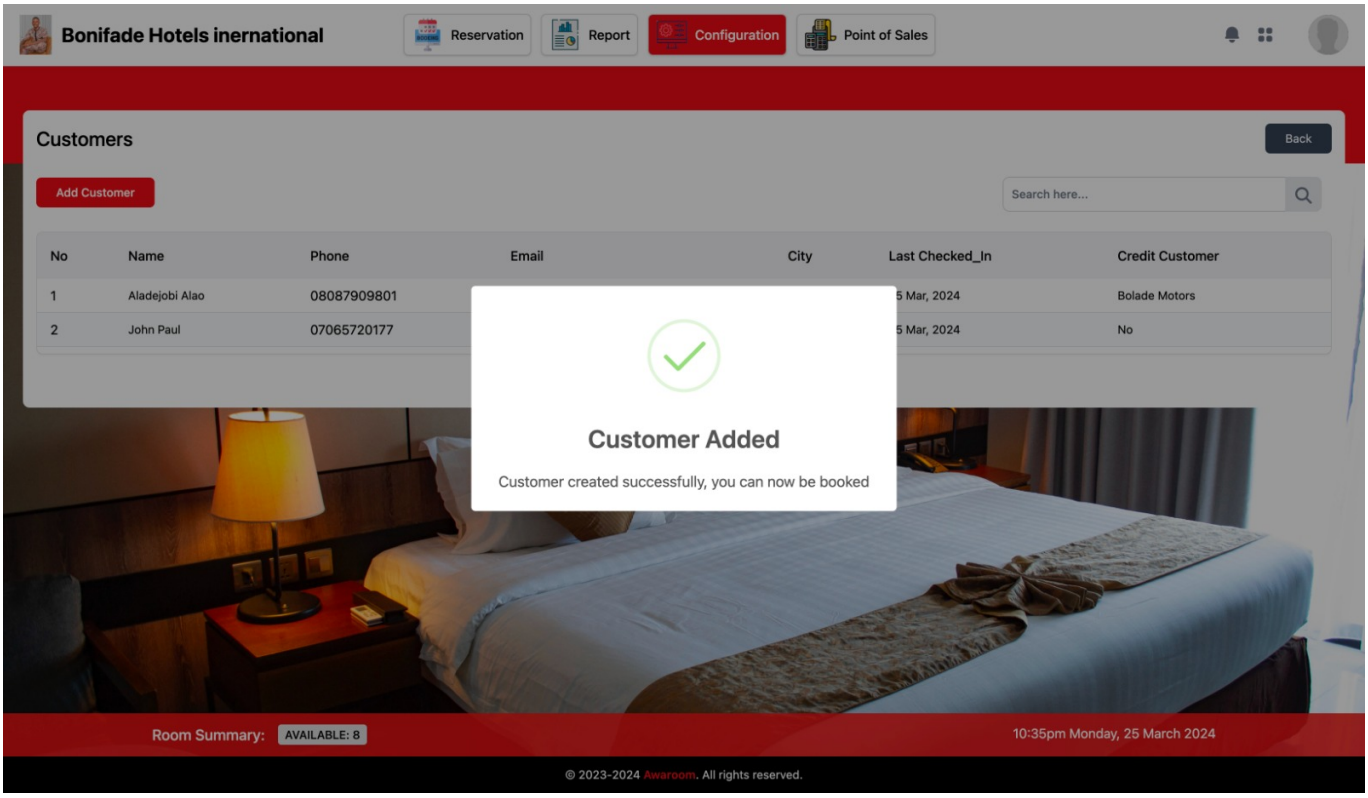

The corporate account setup is designed for business accounts. It allows companies or firms to have their staff members' bills charged to their account, rather than paying directly. Credit customers who are staff members of the business can be added to the the business. The corporate account shows the business name, the amount owed the hotel etc. The admin can edit a corporate account and also delete the account from the system if the hotel does not want to to do business with the company/firm anymore. To Add business(companies/firms) click on the Add Business button and click in save after filling the correct details.

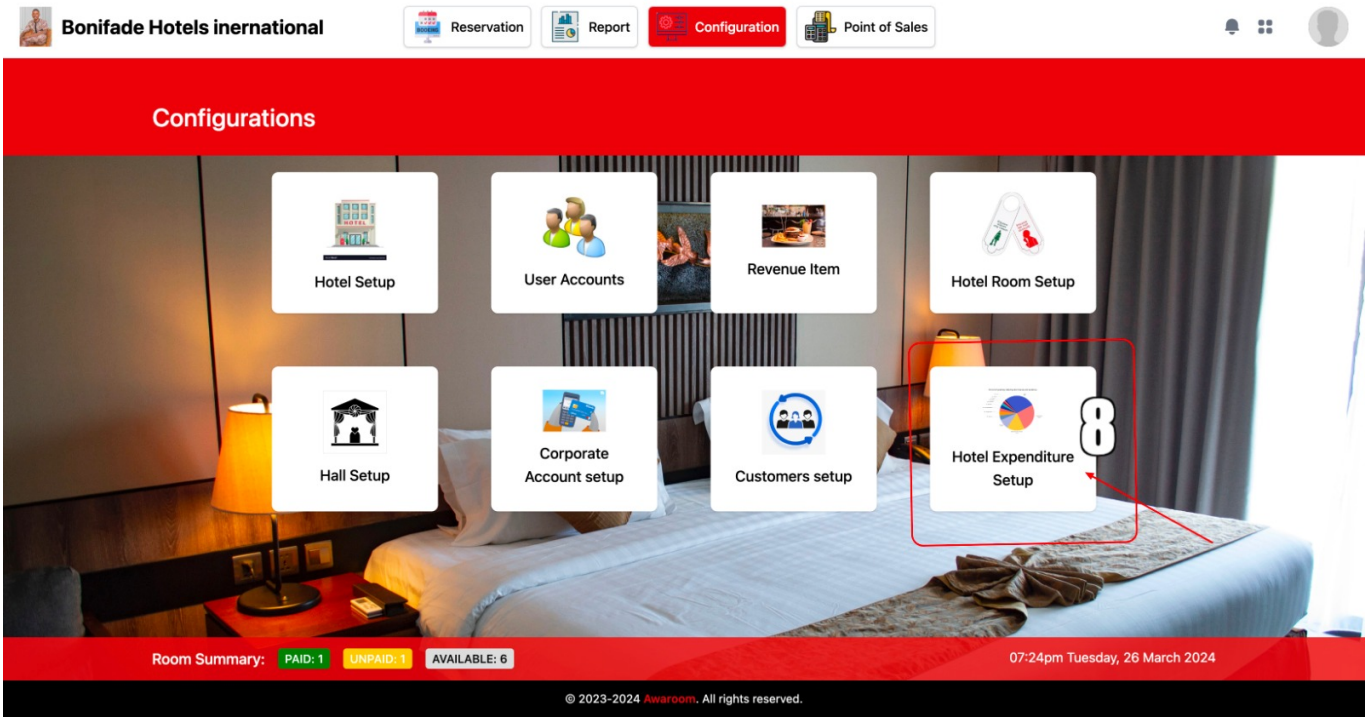

Customers Setup

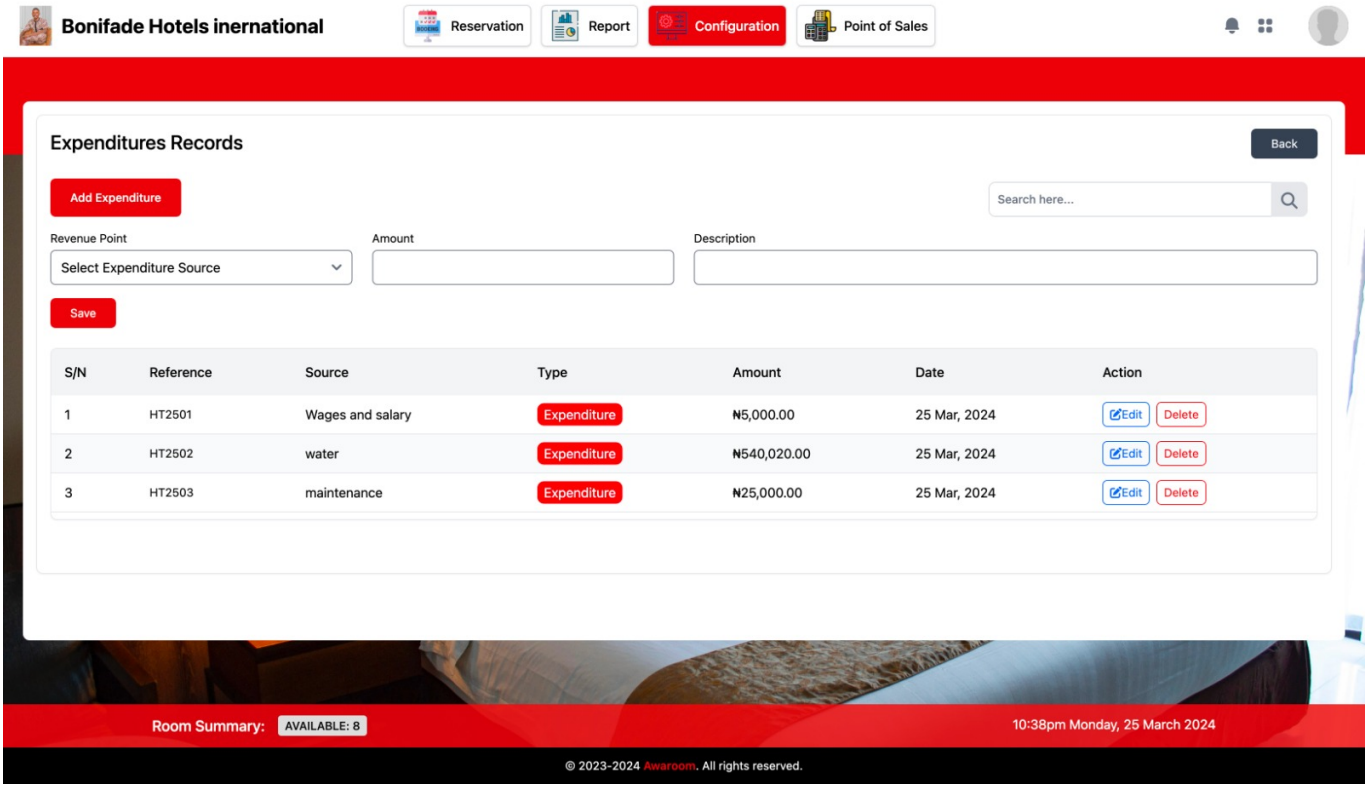

The customer setup feature allows the admin and any staff member to add customers to the system. When a customer wants to book a room or a hall, their phone number is entered into the system. If the customer's information is already in the system, it can be fetched automatically. If not, the admin or staff member can add the customer's details to the system. Credit and non credit customers can be added into the system. To add customer, click on the add customer button and save after filling in the correct details.

Hotel Expenditure Setup

This feature allows the admin add expenditure of the hotel. The Expenditure setup allows for transperency of the hotel finances. To add expenditure, click in the add expenditure button and save when the correc details have been filled. The expenditure records are also kept here and a breakdown for each record is made, unlike the expenditure head where only the head can be added.

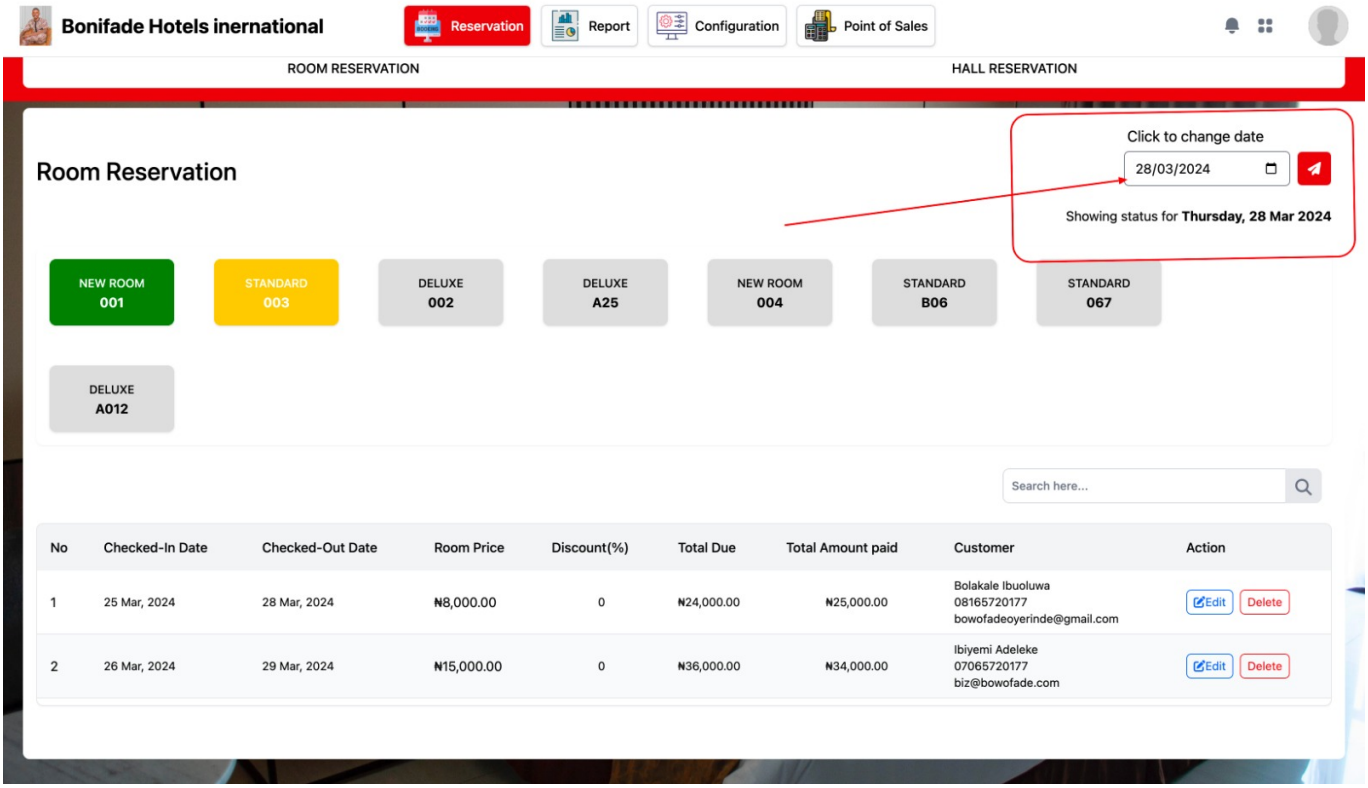

After following these steps you have successfully configured your system.

To make Room Reservation

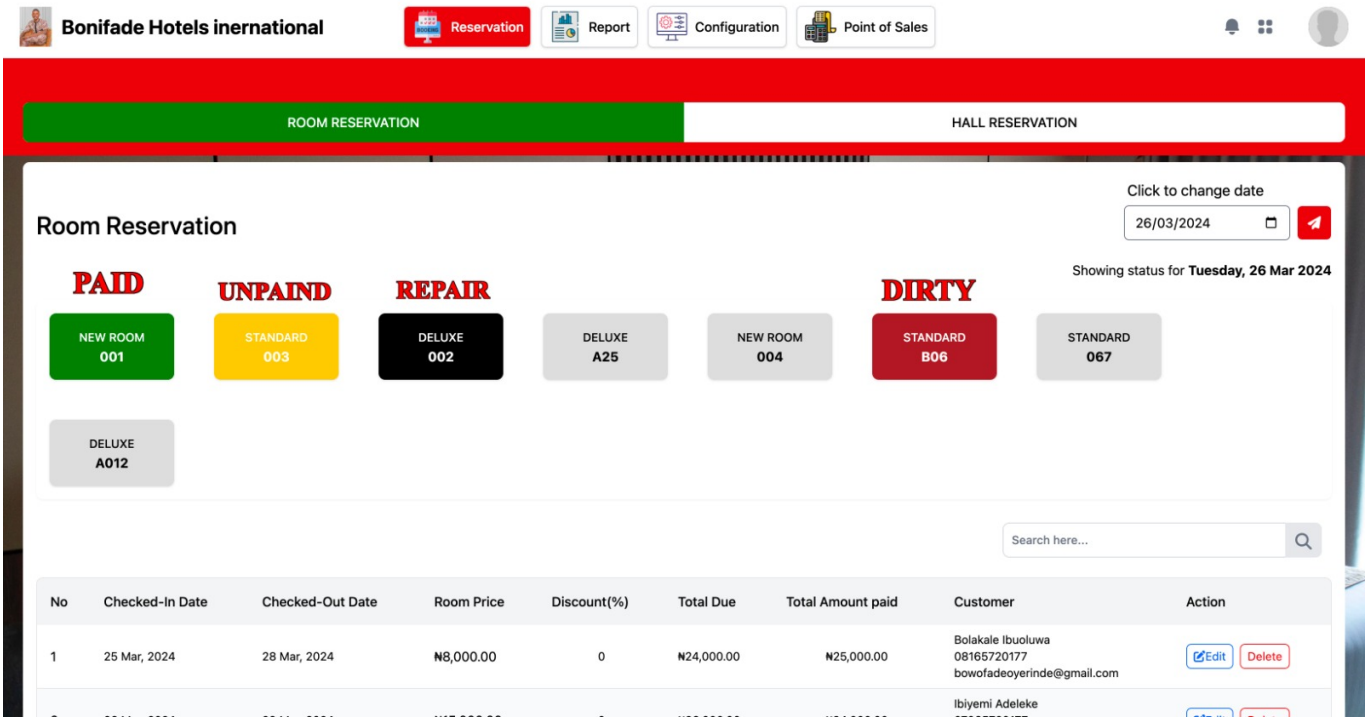

To make room reservation for a customer one need to check for the available rooms on the date the customer will be check-in, the date can be changed on the top right corner of your screen to the specific

date the customer wants to check in.

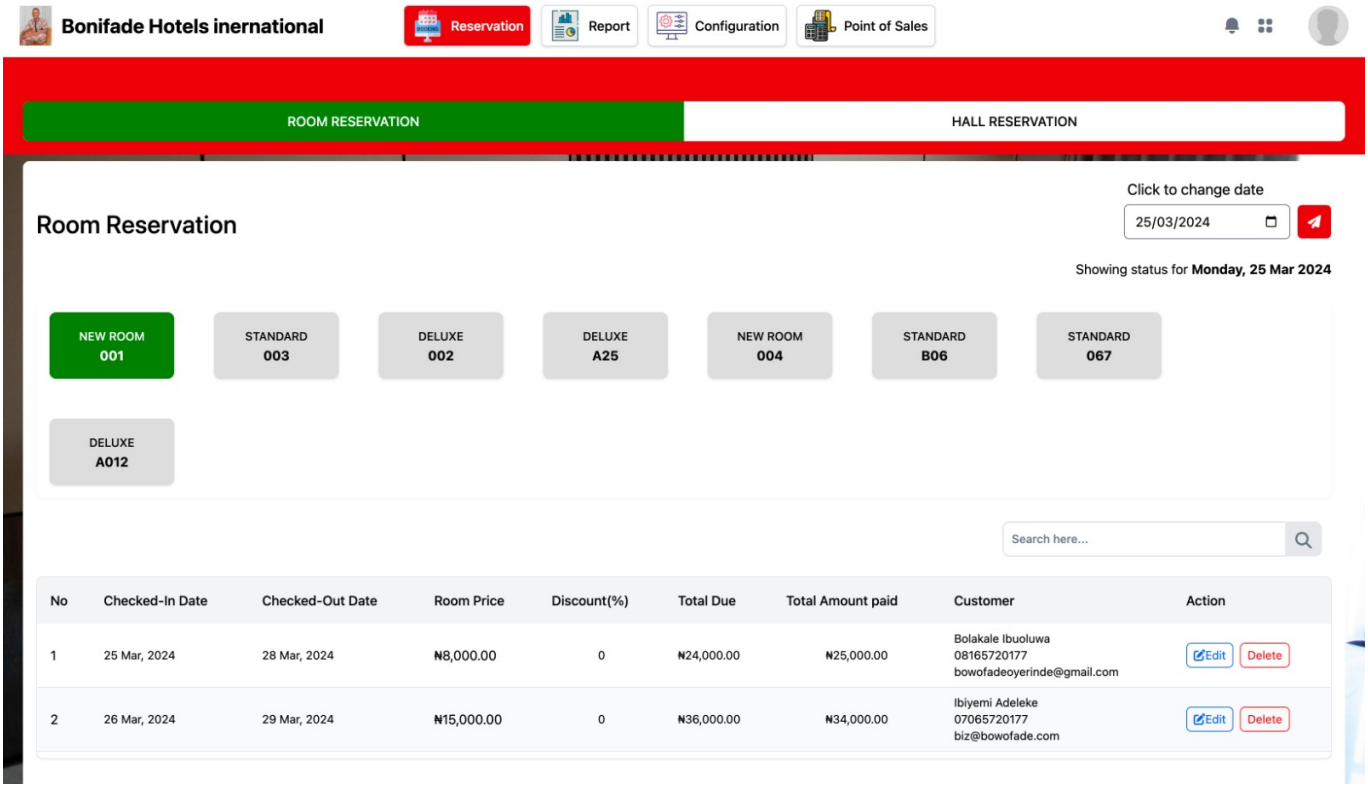

To make it easy to do this colors are tagged with room numbers and each color says something to the admin or staff member.

- Green. A booked and **paid** room.
- Yellow. A booked room with **unpaid** and partial payment(deposit).
- Black. A Room under **repair**.
- Red. A **occupied** room.
- Redish brown. A **dirty** room.
- Gray. An **available** room.

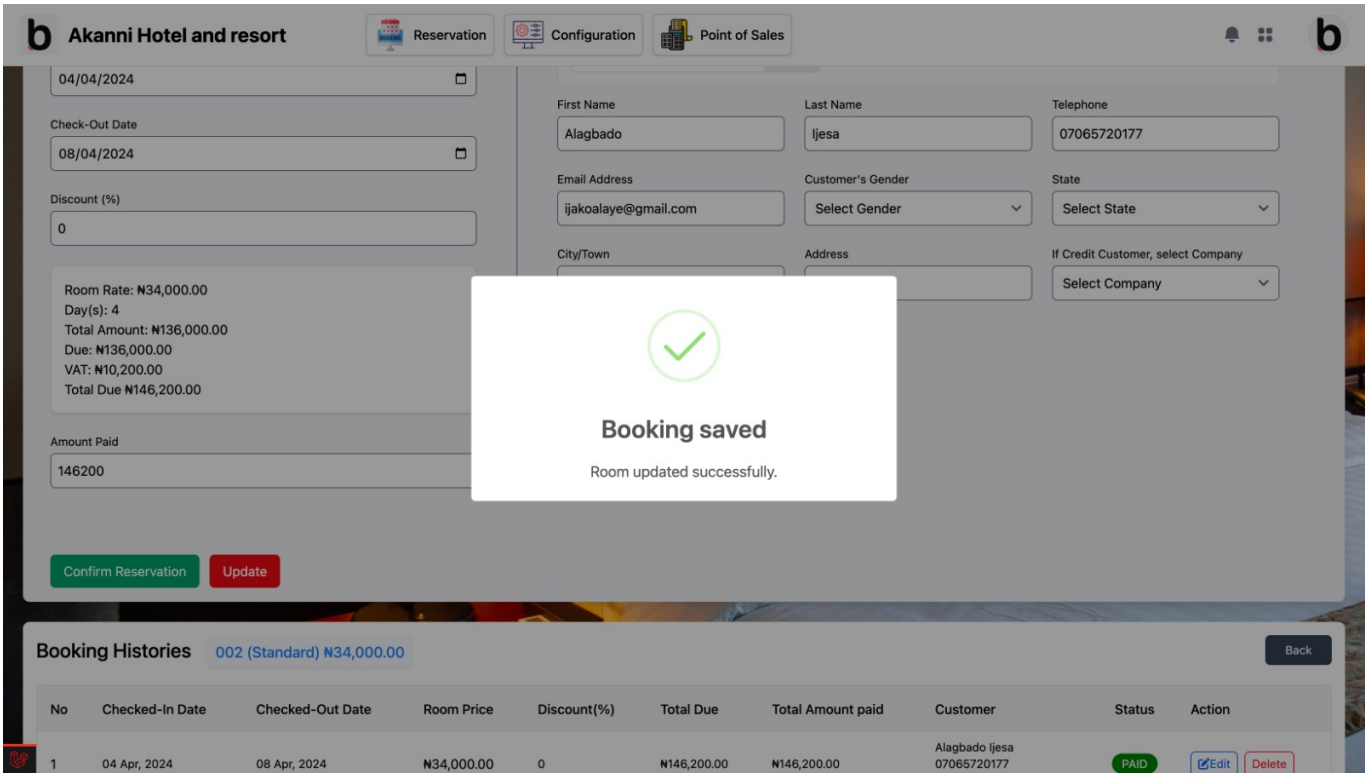

To book a room/make a reservation for a customer, the date the customer wants to check-in should be checked the a room can be booked from the available rooms.

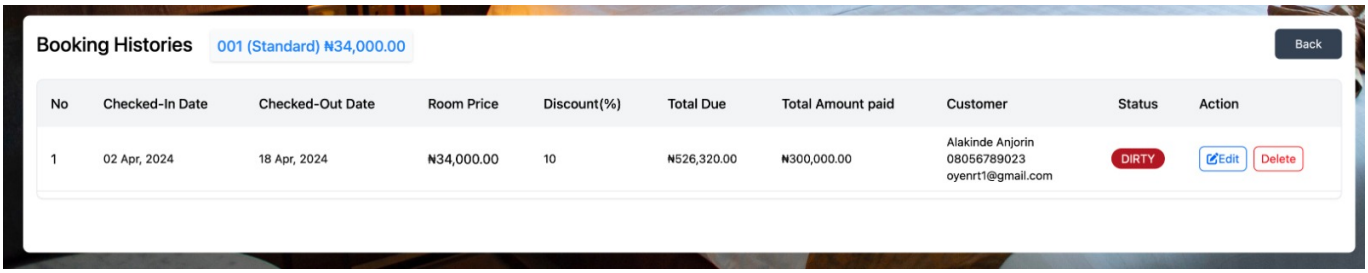

From the rooms in the picture below, it shows that room 001 is green which means that it has been paid for by a customer and it is not available for booking on Monday 25 March 2024. All the other rooms are color gray and they are available to be booked or reserved.

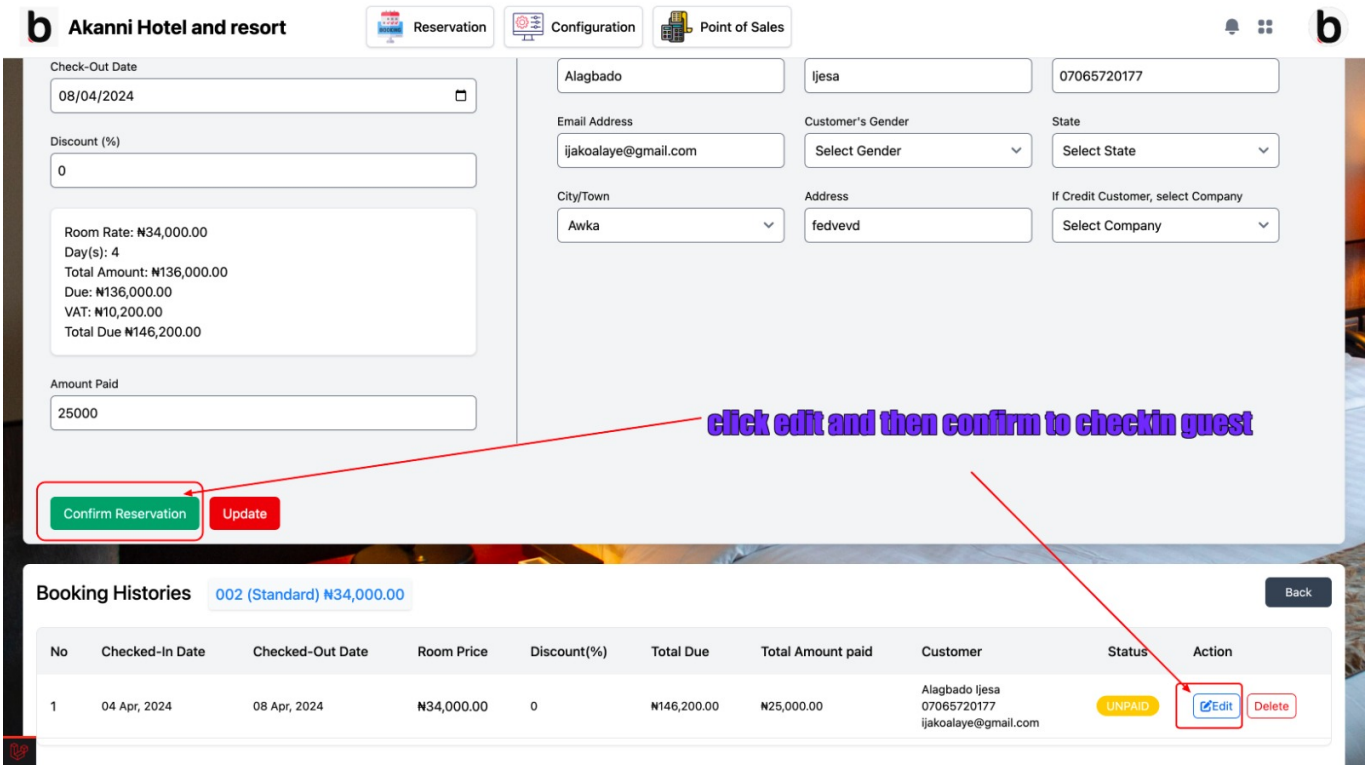

To book an available room for a customer, click on the room number. By hovering on the room number you can see the room information and status of the room. When you click on the room number you are directed to the page where you can add the customers booking, after filling the correct details click in the book reservation button to secure the customer reservation.

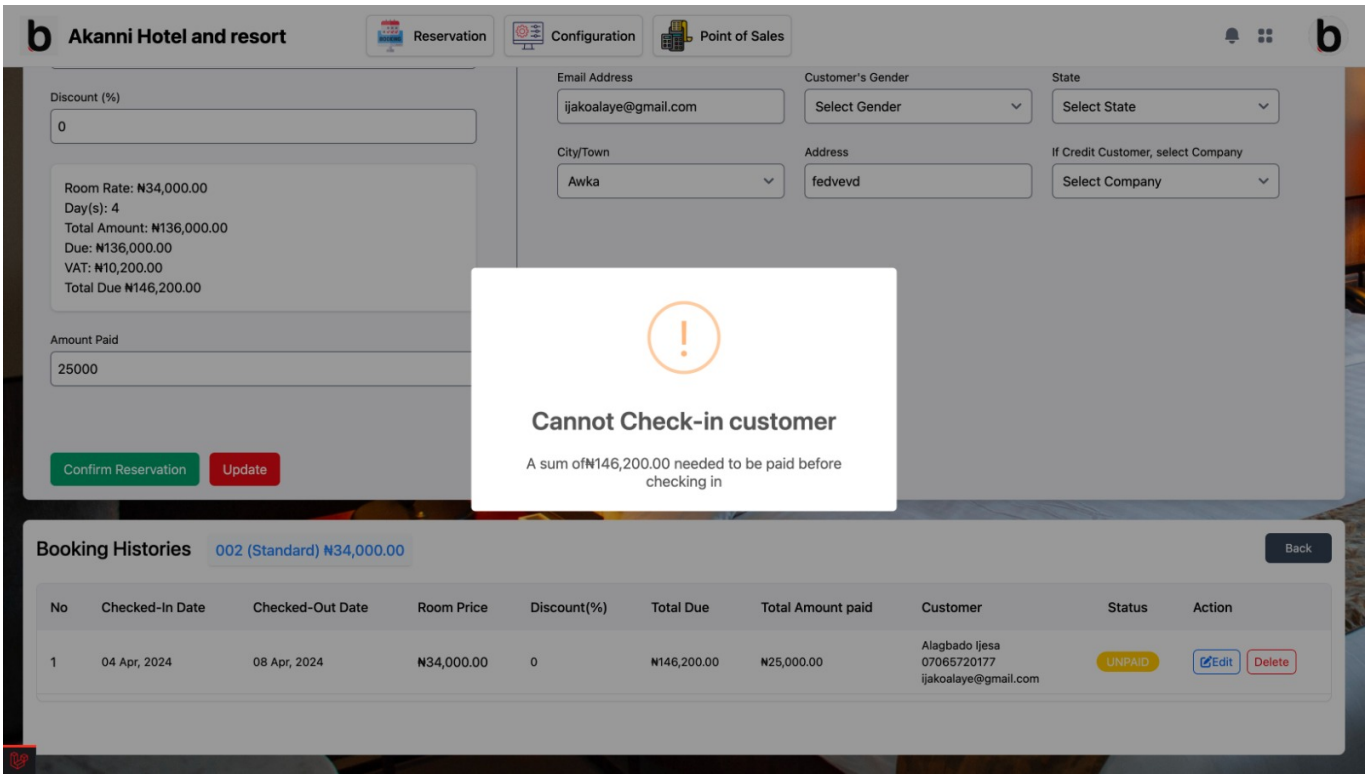

On the Room Reservation page, there is the Booking Histories which is a list that shows which rooms have been booked by customers, the check-in and check-out date, the price of the room, the amount which was paid(deposit) and the amount that is due, the discount that was given(if any was given), and the details of the customer who reserved the room. It also shows the room status.

To check a customer in the admin or staff member will click on the edit button on the booking history of that customer to confirm the reservation (check in the customer). The details of the customer booking will popup after clicking the button and you can click on the confirm booking button.

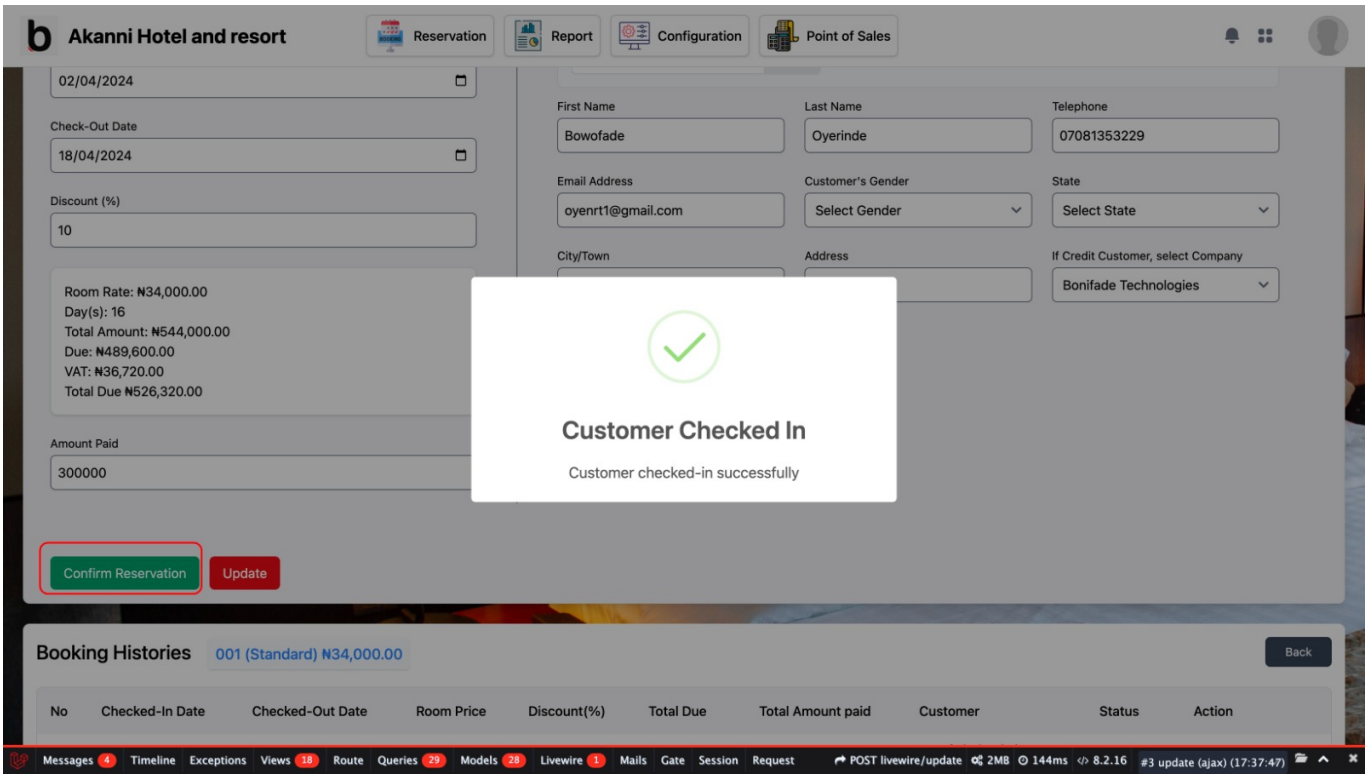

If the Room was booked but not paid for, or if the customer made partial payment when the customer wants to check-in there will be an error message which will tell the staff member the amount that needs to to be paid before checking in. But it's only the admin/owner can force-checkedin a customer even if the booking is unpaid.

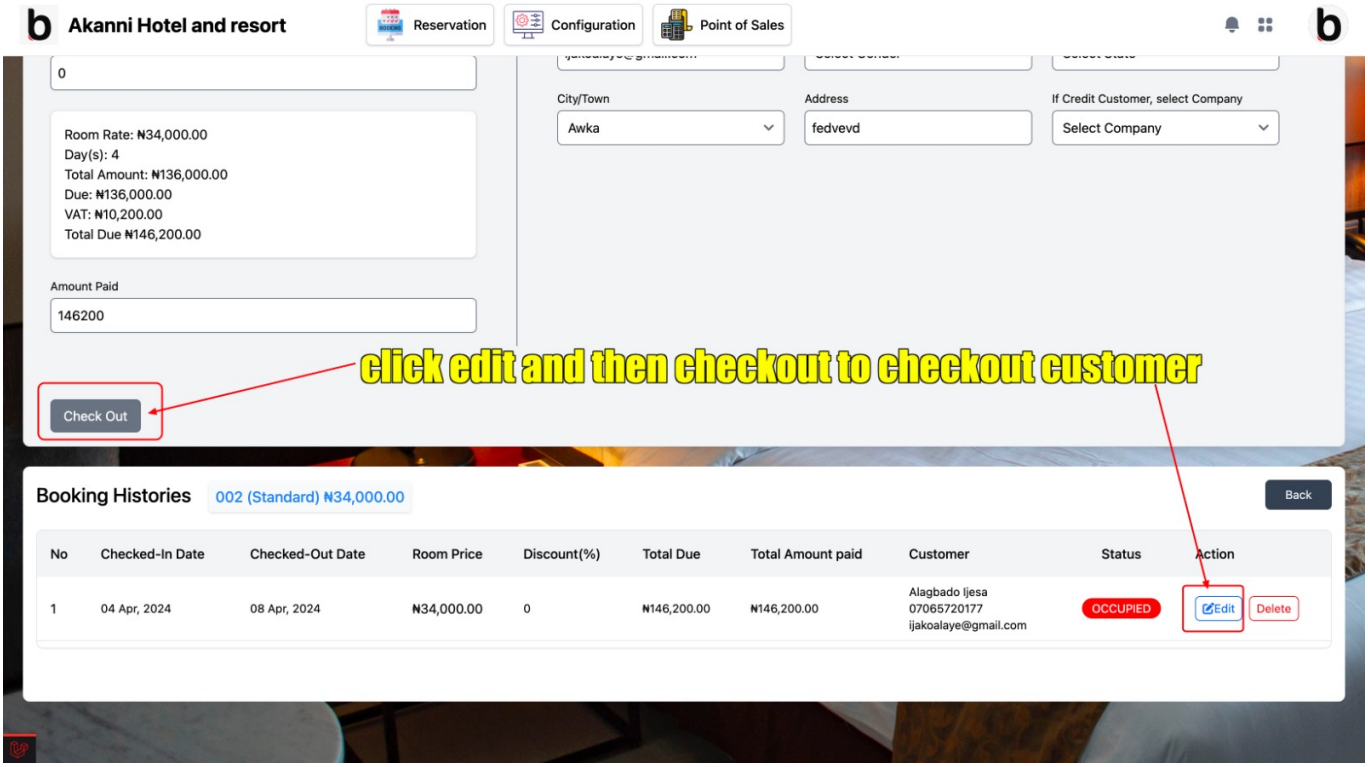

The Admin/Hotel owner can check-in any guest/customer without payment or full payment

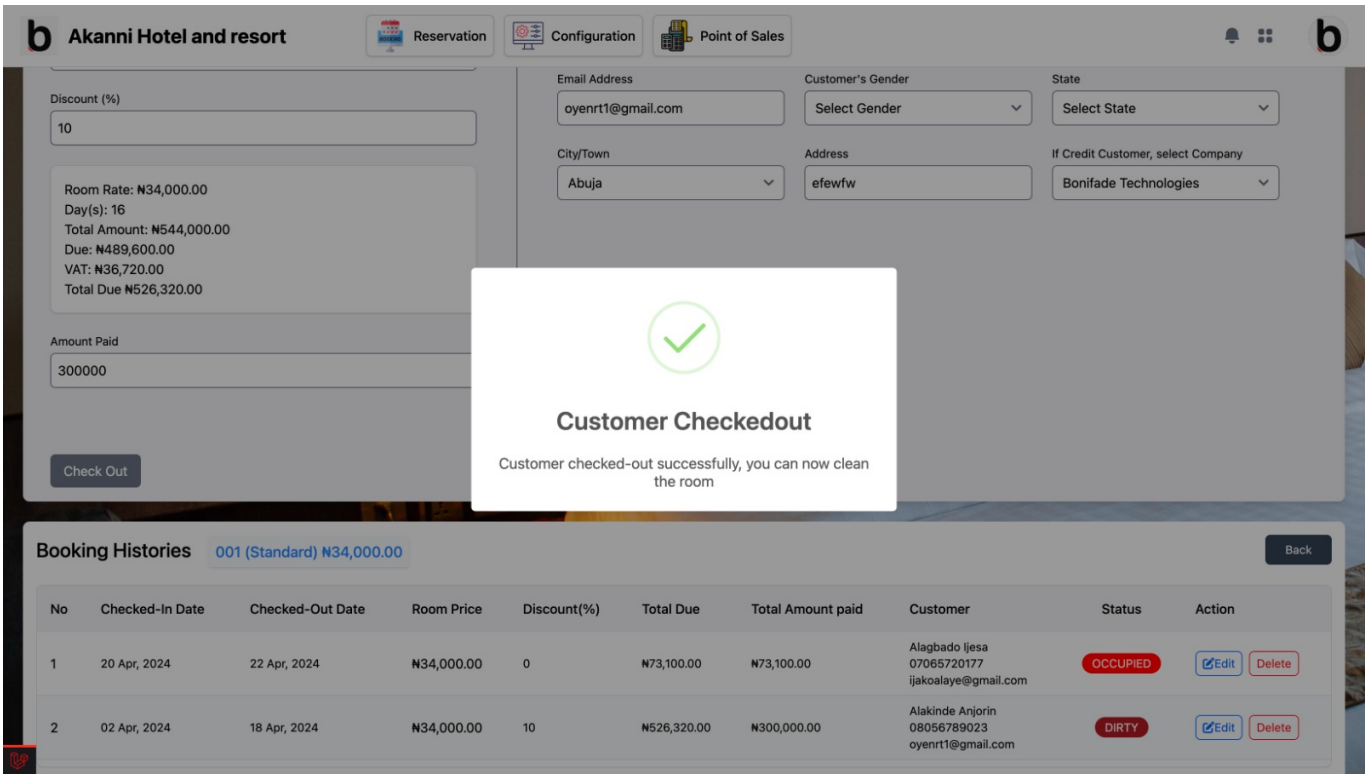

When the room has been fully paid for the customer can be checked-in and there will be no error message. Also credit customers can be checked-in without any payment or full payment because the hotel pays for

their bill until their company/business clears the bill. Credit customers cannot be checked-in only when their company limit has been reached.

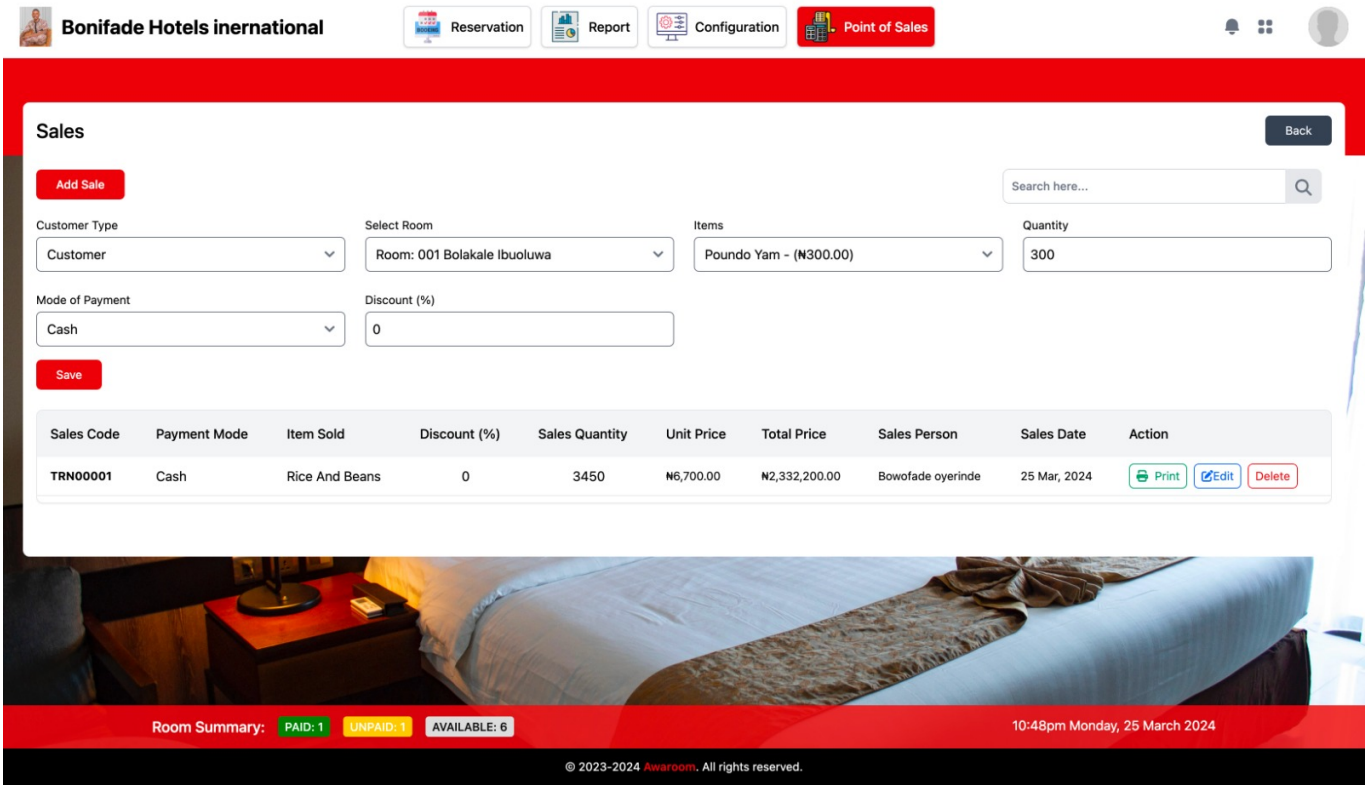

To check-out a customer, the admin or staff member will click on the edit button on the booking history, and procede to click on the checkout button. When a customer checks-out of a room the status of the room becomes dirty. A customer reservation can also be deleted by clicking on the delete button.

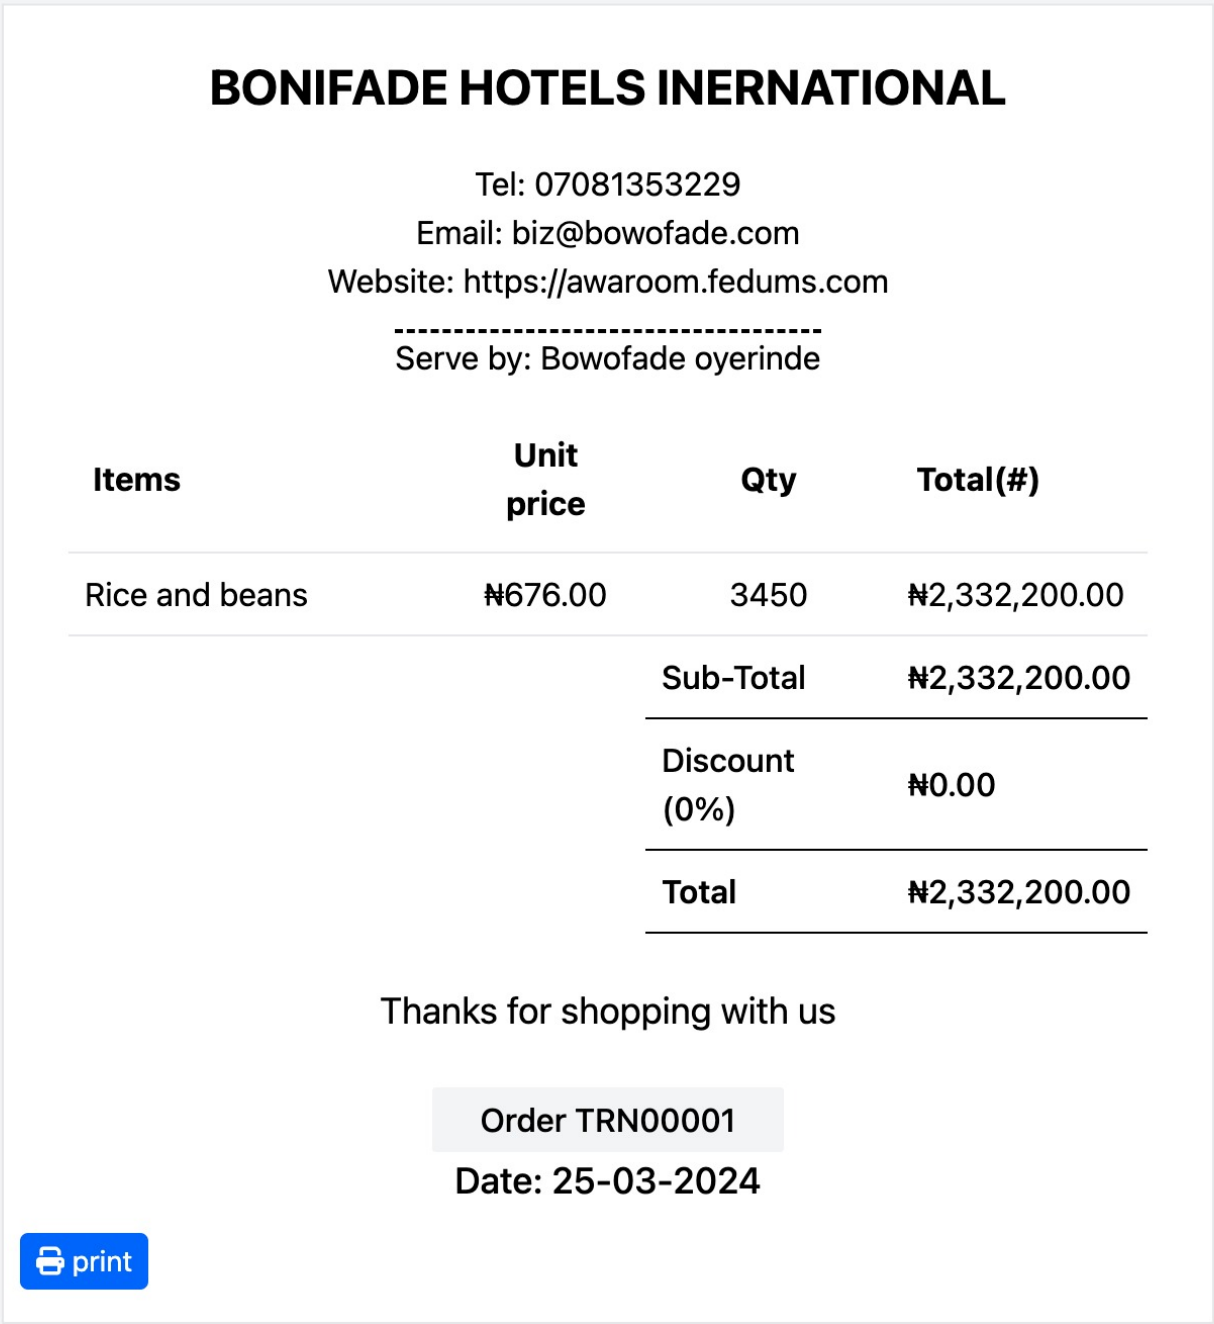

Point of Sales

The point of sales is where each sale made by the hotel is entered into te system. To add sales click on the add sales button and fill in the correct details click on the save button to save. You will see a list of thee sales that have been added into the system and information about each sale which can be printed, edited or deleted.

When a sales is printed, the sales receipt is generated then printed. Below is a copy of a sales receipt.

Report

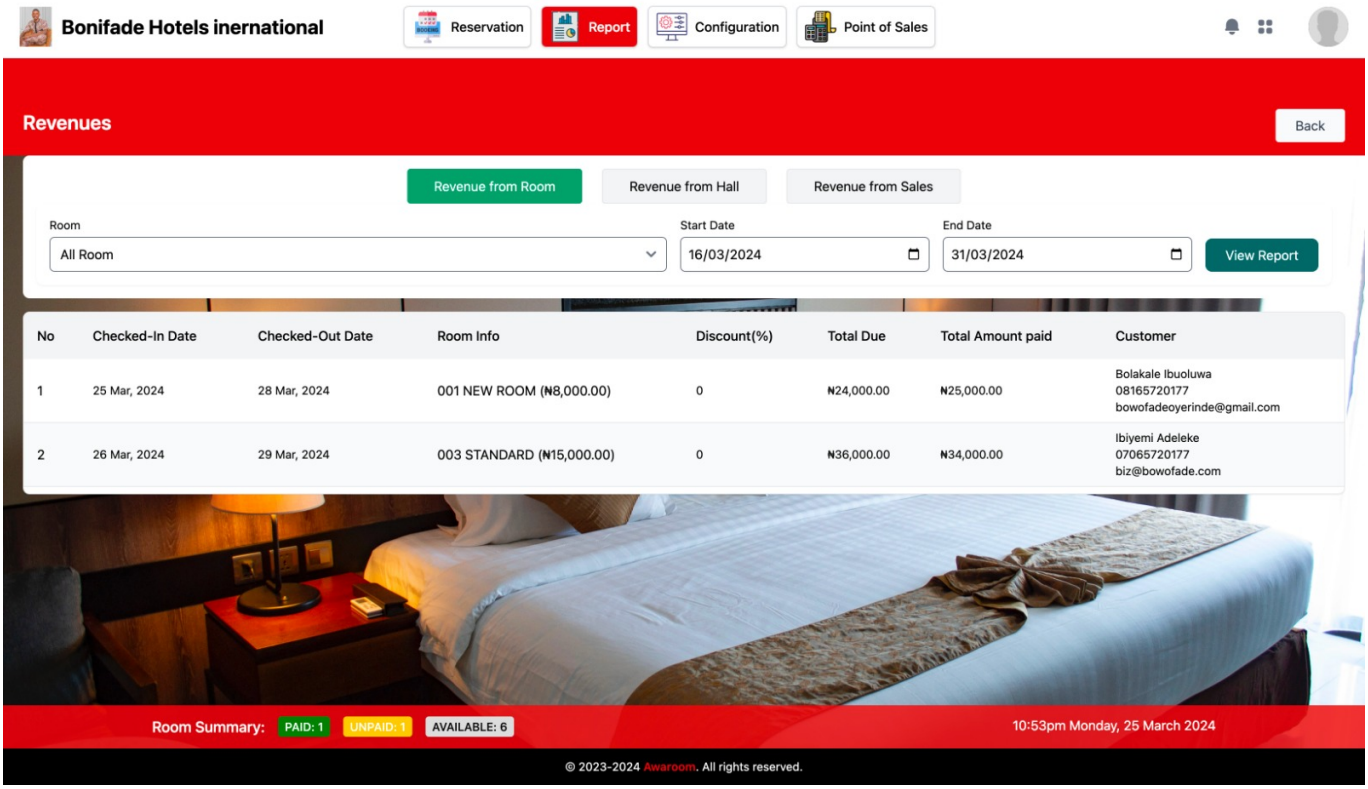

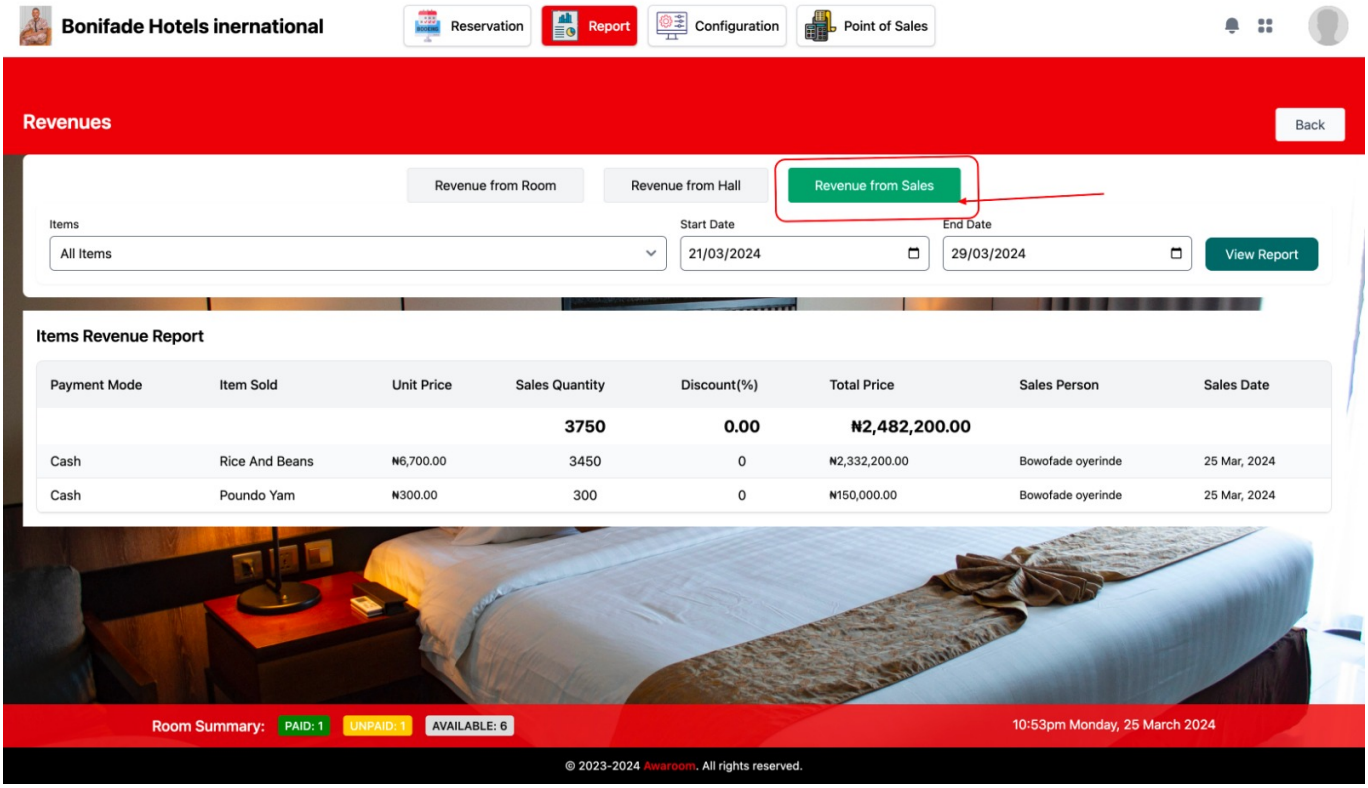

The Report includes the Revenue and Finance of the hotel.

- Revenue

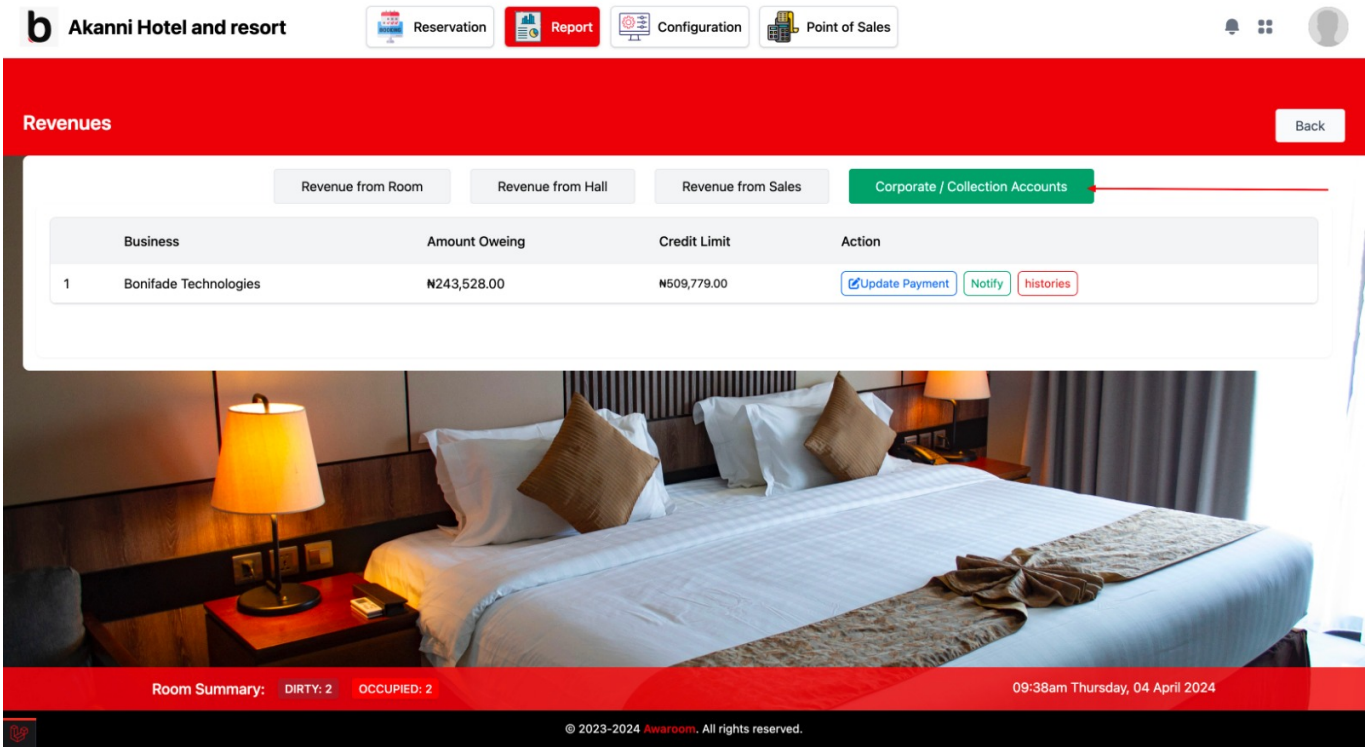

The Revenue is the income the hotel renerates from their revenue source. The hotel revenue source are Rooms, Halls and sales. The report of each revenue source can be viewed.

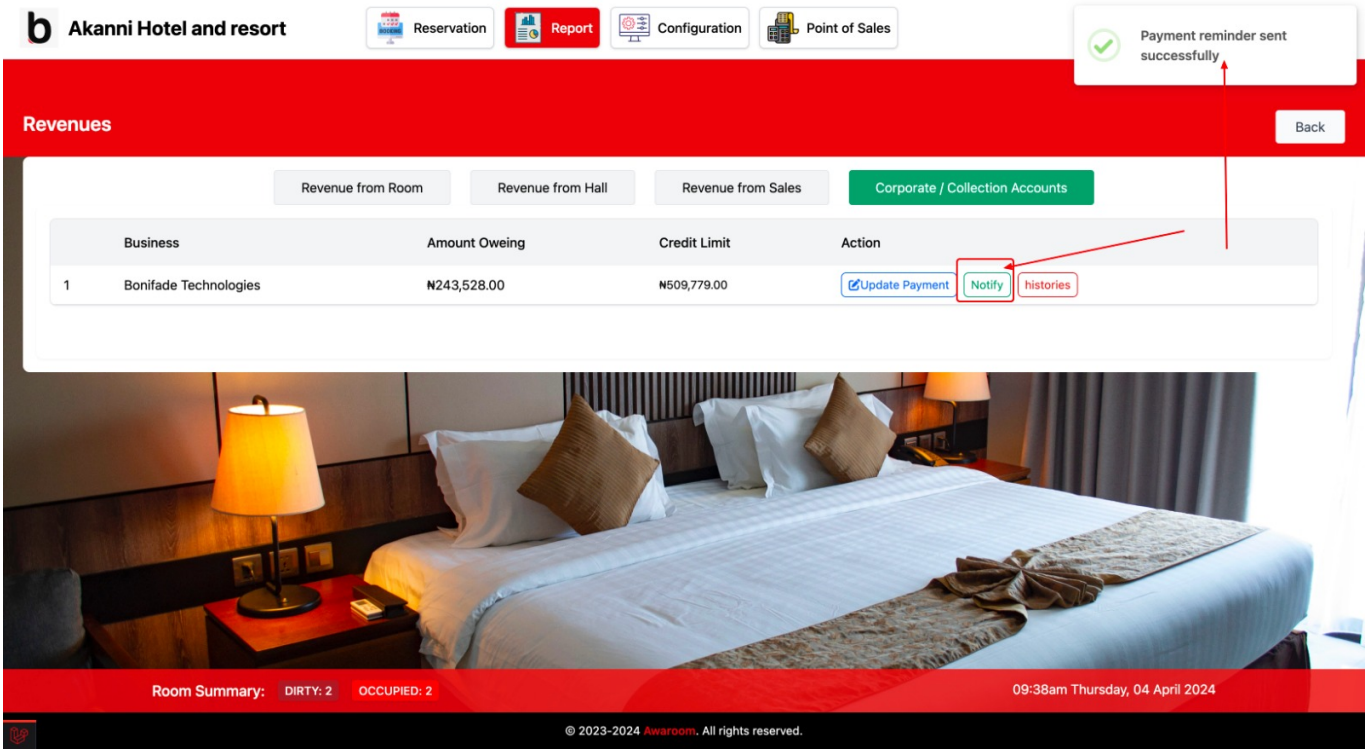

Whenever a booking is made by a staff member of a business that is registered with the hotel, the bil is added to the corporate business account, there is a limit on every business account. When the account limit is reached a notification can be sent to the business to remind the business to make their payment.

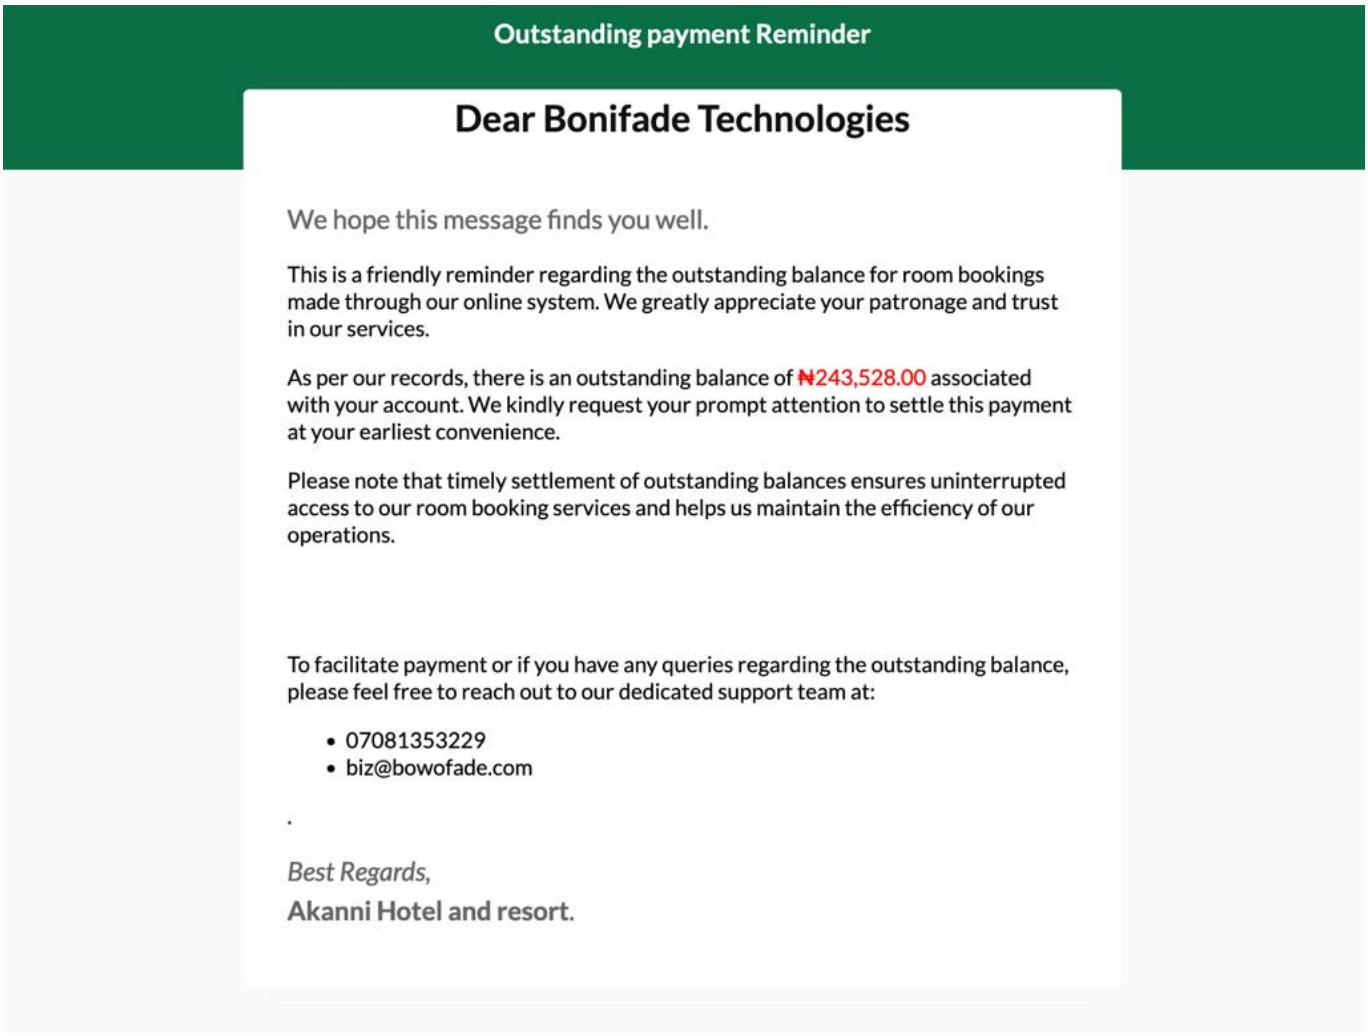

To notify a business of their outstanding payment or update payment made by a business, click on Report at the top of the screen. Click on Revenue then click on corporate collections account here you will see the list of the businesses.

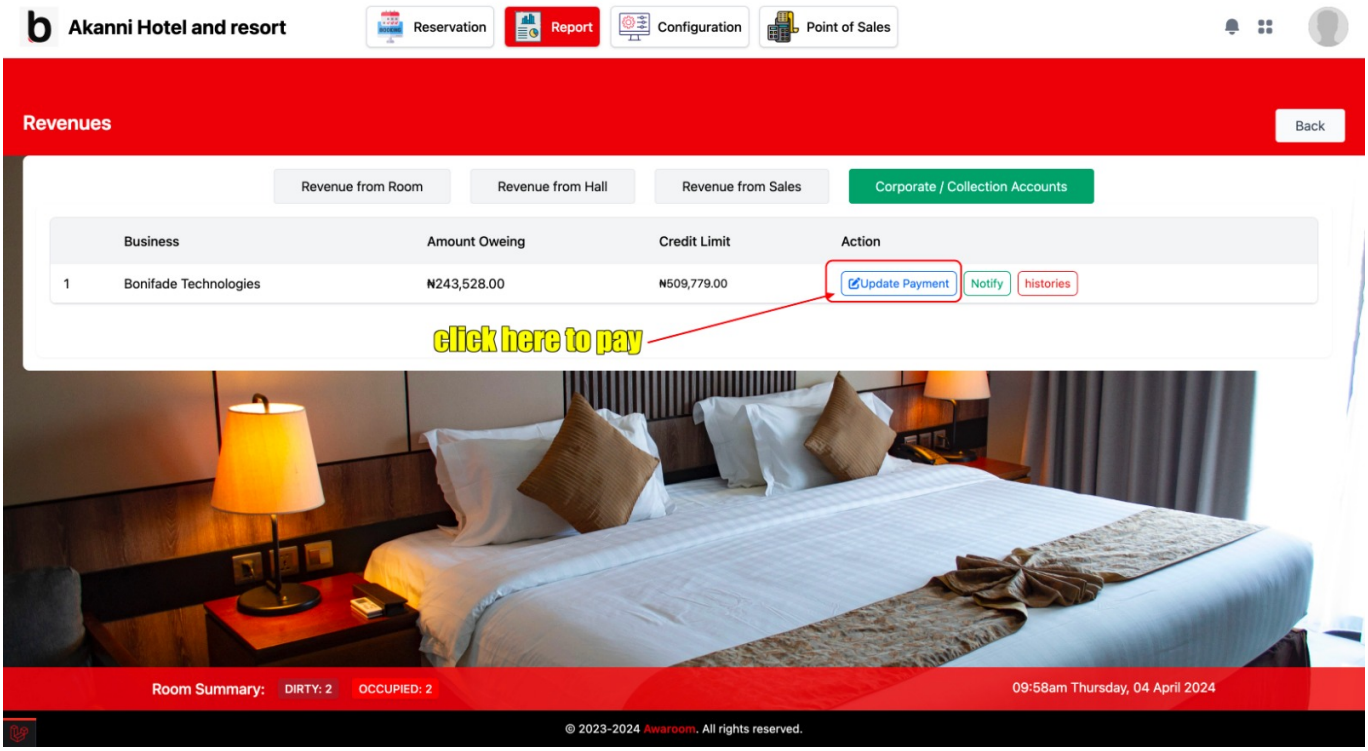

To Notify business of their outstanding payment if limit has been reached, click on the notify button.

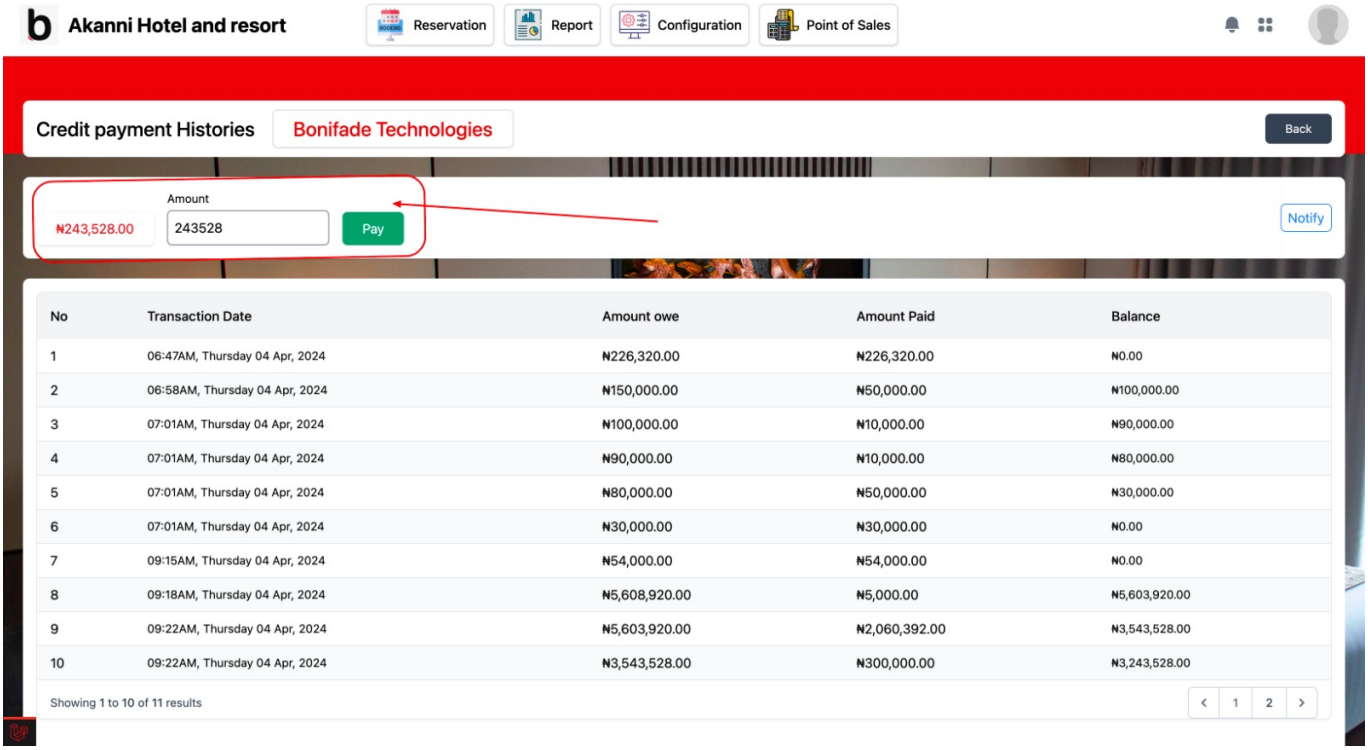

An email will be sent to the business mail to remind them of their outstanding balance to effect timely settlement.

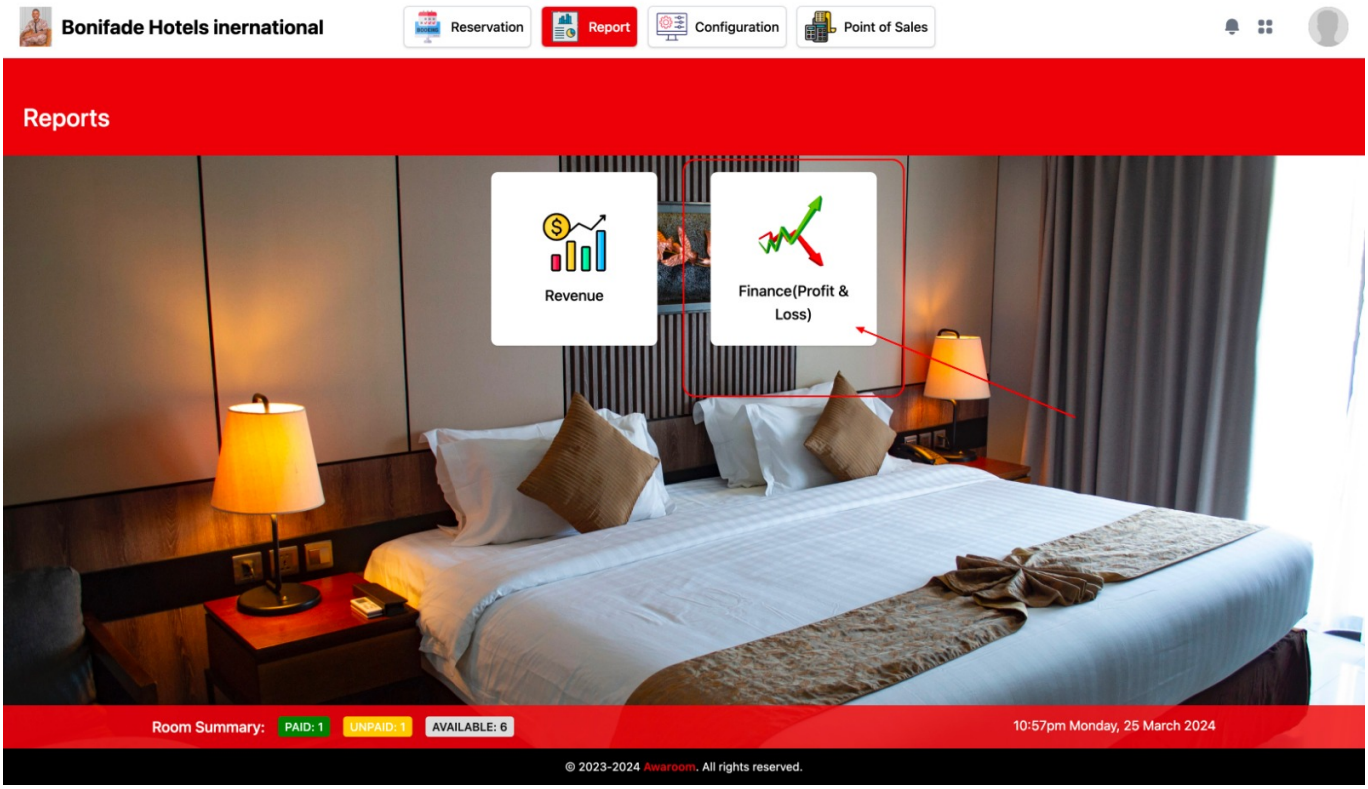

You can update payment of a business if payment has been made, notify business of their outstanding payment. To update click on the update payment button.

You will be directed to this page where you will fill in the details of the payment made.

- Finance (Profit and Loss)

This is where the revenue and expenditure are broken down. The Profit(Revenue) and Loss(Expenditure) of the hotel are specified along with their sources and summed to get the total amount the hotel got as profit and the total amount that was spent on expenditure. The start and end date of each profit and loss report will be set that way the system calculates from the start date and stops on the end date.
